

TISA Working Group Report

CERES TISA Sublead: D. Doelling

TISA: D. Keyes, C. Nguyen, M. Nordeen, R. Raju, M. Sun, F. Wrenn

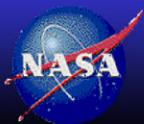

GEO calibration: R. Bhatt, C. Haney, B. Scarino, A. Gopalan

GEO Image cleaning: ~~M. Nordeen, D. Keyes, K. Khlopenkov, D. Spangenberg, F. Chen, I. Antropov, S. Gibson, R. Arduini~~

Sub-setter: C. Mitrescu, P. Mlynczak, C. Chu, E. Heckert,

Radiation Budget Workshop

18-21 October, 2016, ECMWF, Reading, England

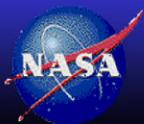

NASA Langley Research Center / Atmospheric Sciences

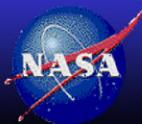

Outline

- Indian Ocean GEO domain processing strategy
 - SYN1deg SW terminator flux anomaly and mitigation
 - SYN1deg and GERB flux comparisons
 - SYN1deg Ed4 and Ed3 mean flux and trend differences
 - SW sensitivity studies
-
- TISA spatially averages the SSF footprint fluxes into $1^\circ \times 1^\circ$ nested grid
 - TISA temporally interpolates the TOA flux between Terra and Aqua measurements to estimate the daily flux mean

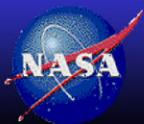

TISA papers

- D.R. Doelling, C.O. Haney, B.R. Scarino, A. Gopalan, R. Bhatt, 2016, Improvements to the geostationary visible imager ray-matching calibration algorithm for CERES Edition 4, *J. Atmos. Oceanic Technol.*, In Press
- K.V. Khlopenkov, D.R. Doelling, 2016, Development of Image Processing Method to Detect Noise in Geostationary Imagery, *Proc. SPIE*, In Press
- R. Bhatt, A. Angal, D.R. Doelling, X. Xiong, A. Wu, C.O. Haney, B. R. Scarino, A. Gopalan, 2016, Response versus scan-angle corrections for MODIS reflective solar bands using deep convective clouds, *Proc. of SPIE* Vol. 9881, doi: 10.1117/12.2223809
- Q. Mu, A. Wu, T. Chang, A. Angal, D. Link, X. Xiong, D.R. Doelling, R. Bhatt, 2016, Assessment of MODIS On-orbit Calibration using a Deep Convective Cloud Technique, *Proc. of SPIE* Vol. 9972, doi: 10.1117/12.2237047
- X. Xiong, A. Angal, J. Butler, C. Cao, D.R. Doelling, A. Wu, X. Wu, 2016, Global Space-based Inter-Calibration System Reflective Solar Calibration Reference: From Aqua MODIS to S-NPP VIIRS, *Proc. of SPIE* Vol. 9881, doi: 10.1117/12.2224320

CERES PRODUCTS ED3 TO ED4 IMPROVEMENTS

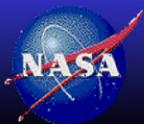

NASA Langley Research Center / Atmospheric Sciences

CERES level 3 Products

- SSF1deg, single satellite TOA flux and cloud product, CERES/MODIS-only observations, assume constant meteorology in between CERES observations
 - No changes between Ed3 and Ed4, use CERES TRMM directional models
- SYN1deg, TOA flux, cloud, and computed surface and in-atmosphere flux product, Terra (10:30LT)+Aqua (1:30LT)+GEO (1-hourly) observations
 - GEO flux improvements next page
- CldTYPHist, MODIS/GEO monthly hourly cloud properties by 3x3 cloud top and optical depth bins
 - Formerly known as ISCCP-D2like product
 - 4-channel GEO cloud properties, Ed3 were 2-channel
- FluxByCloudType, Instantaneous gridded CERES fluxes by MODIS 7x6 cloud types
 - New, no Edition 4 product
 - Sub-footprint multi-channel MODIS narrowband to broadband flux conversion. Sub-footprint fluxes normalized to CERES observation

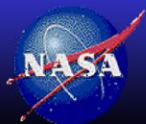

Edition 4 SYN1deg Improvements

	Edition 3	Edition 4
GEO Calibration	<ul style="list-style-type: none"> Terra-MODIS Collection 5 reference GEO/MODIS ray-matching 	<ul style="list-style-type: none"> Aqua-MODIS Collection 6 GEO/MODIS ray-matching Validate with DCC and deserts SCIAMACHY spectral band adjustment factors (SBAF) MTSAT-1R point spread function

INDIAN OCEAN GEO DOMAIN PROCESSING STRATEGY

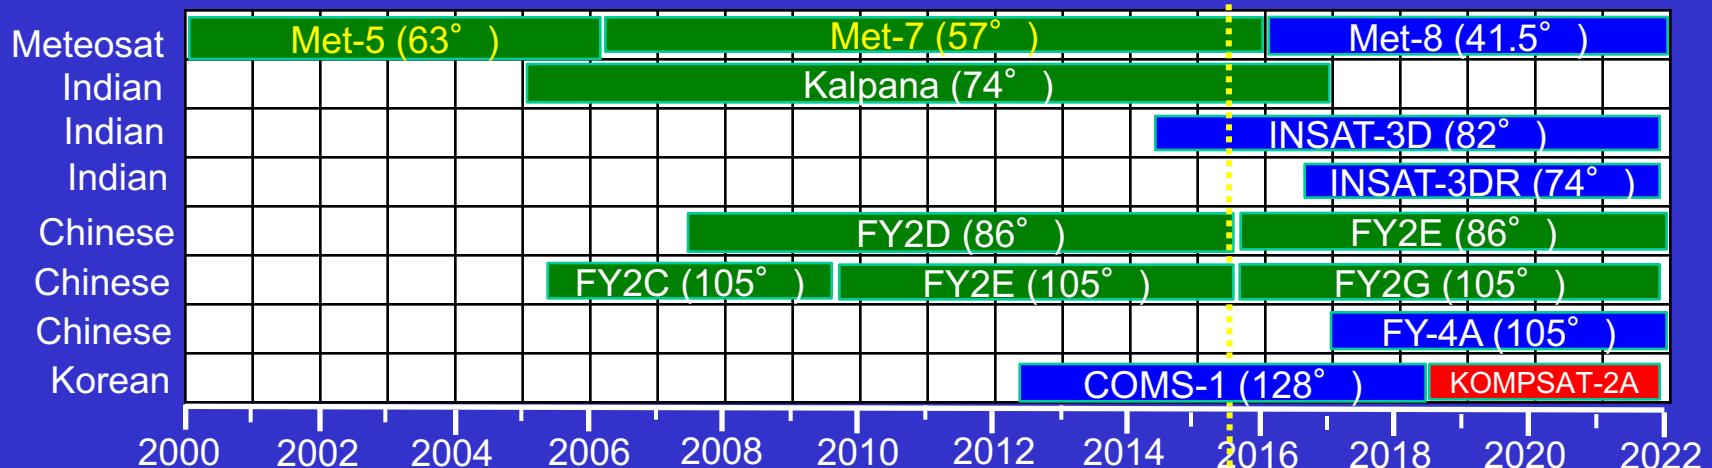

NASA Langley Research Center / Atmospheric Sciences

CERES record Geostationary Time Series

Indian Ocean Geostationary Time Series

1st generation

2nd generation

3rd generation

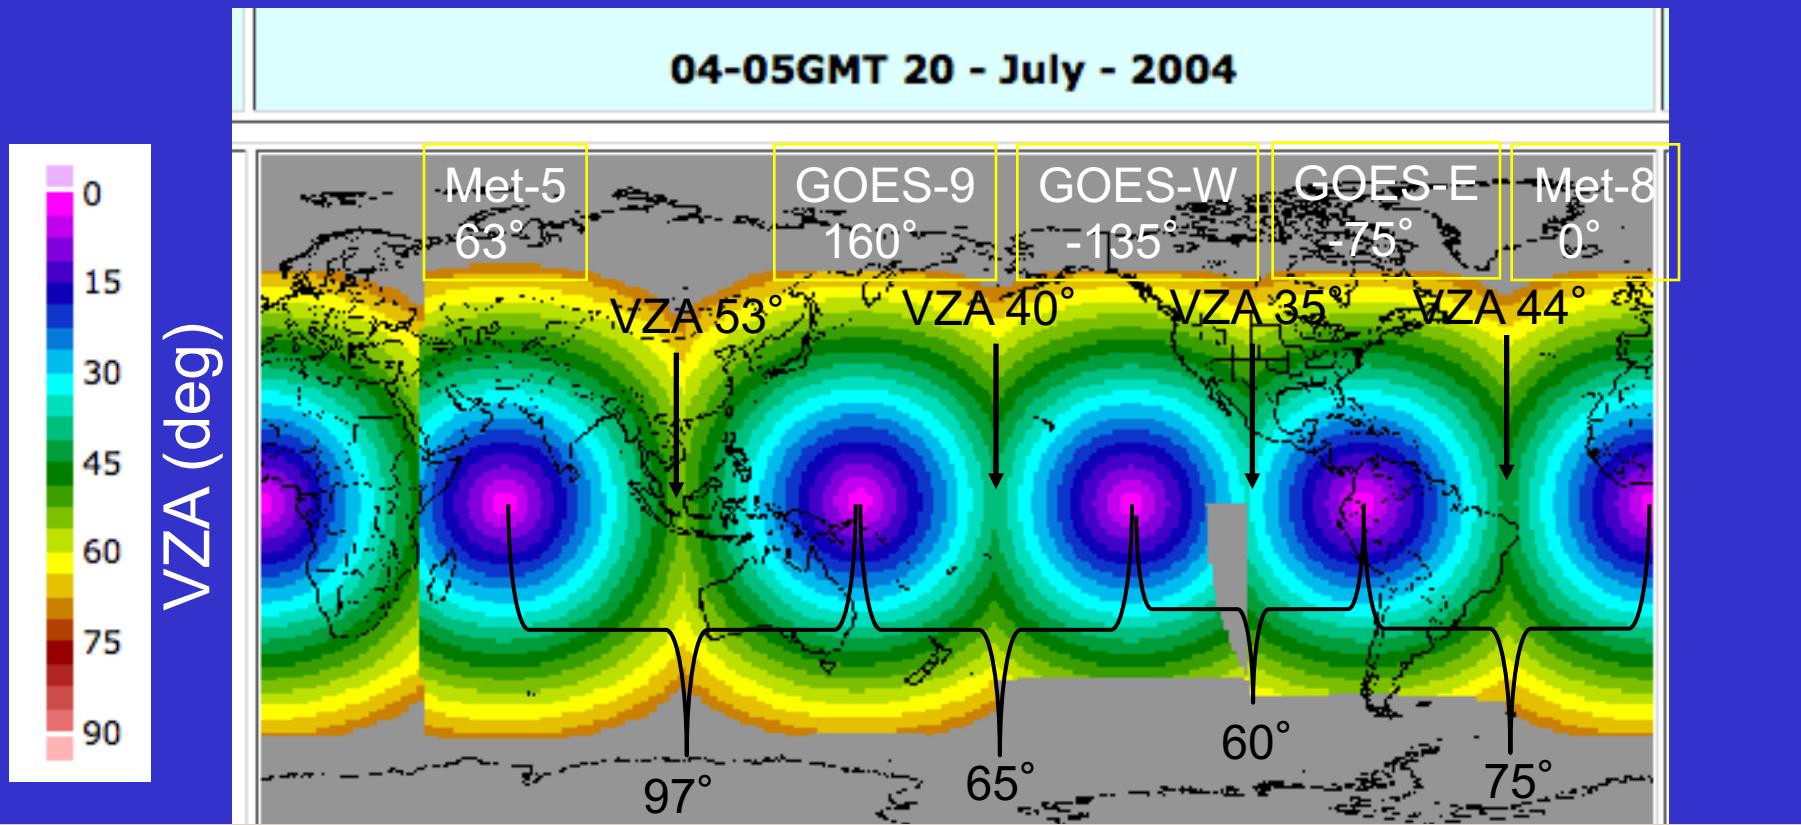

These are the GEOs between 0E and 140E

Extent of Ed4 processing

- FY-4A, to launch in Dec. 2016, 3 axis stabilized,
AGRI imager has 14 channels, 0.5km to 4km resolution, FD every 15 minutes
GIIRS imager, IR hyperspectral sounder (15km) over China
- KOMPSAT-2A to launch in 2018, imager similar to GOES-R
- Met-8 (41.5E) beginning Sept 21, 2016,
- Met-7 (57E) decommissioned end of 2016
- INSAT-3DR (74E) launched on Sept 8, 2016
- FY-4A to launch in Dec. 2016

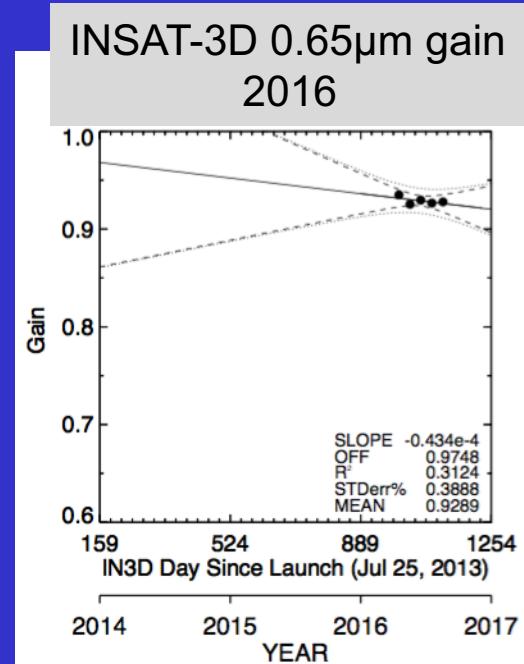

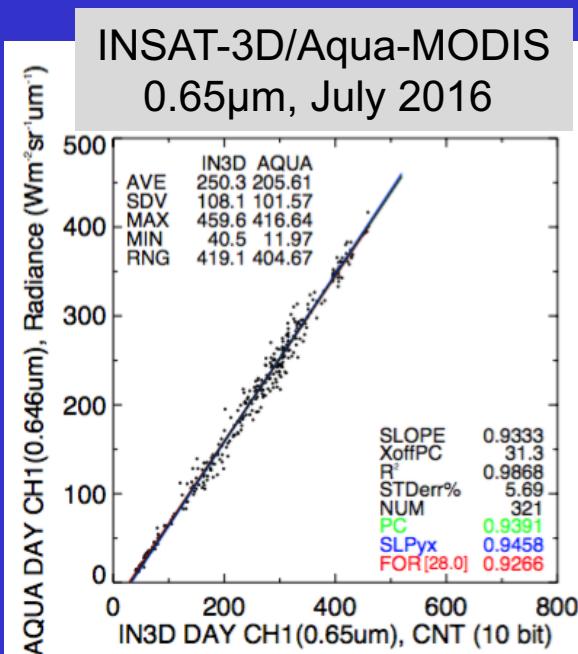

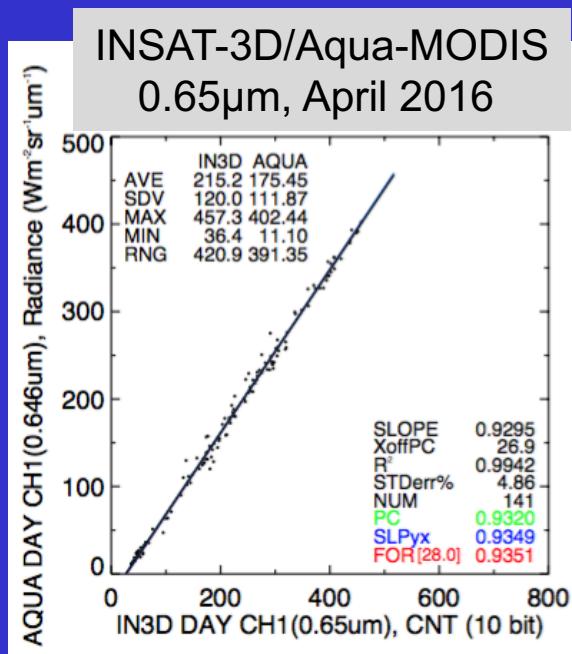

Indian Ocean Met-8 (42E) (current choice)

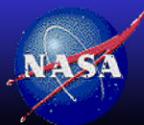

- What to do beginning in 2017, when Met-7 is decommissioned
- There would be 98° longitude separation between Met-8 (42E) and Him-8 (140E), Similar to time between 2003 and 2005, using Met-5 (63E) and GOES-9 (160E)
- Prefer to only process 5 GEOs over the CERES record
- Met-8 is a well behaved imager, and is well-calibrated when referenced to MODIS
- Data not yet available beginning in November on McIDAS servers

Indian Ocean INSAT-3D (82E) visible

- The INSAT-3D visible channel has a linear response and well-behaved
- Cloud working group has real-time cloud properties for INSAT-3D

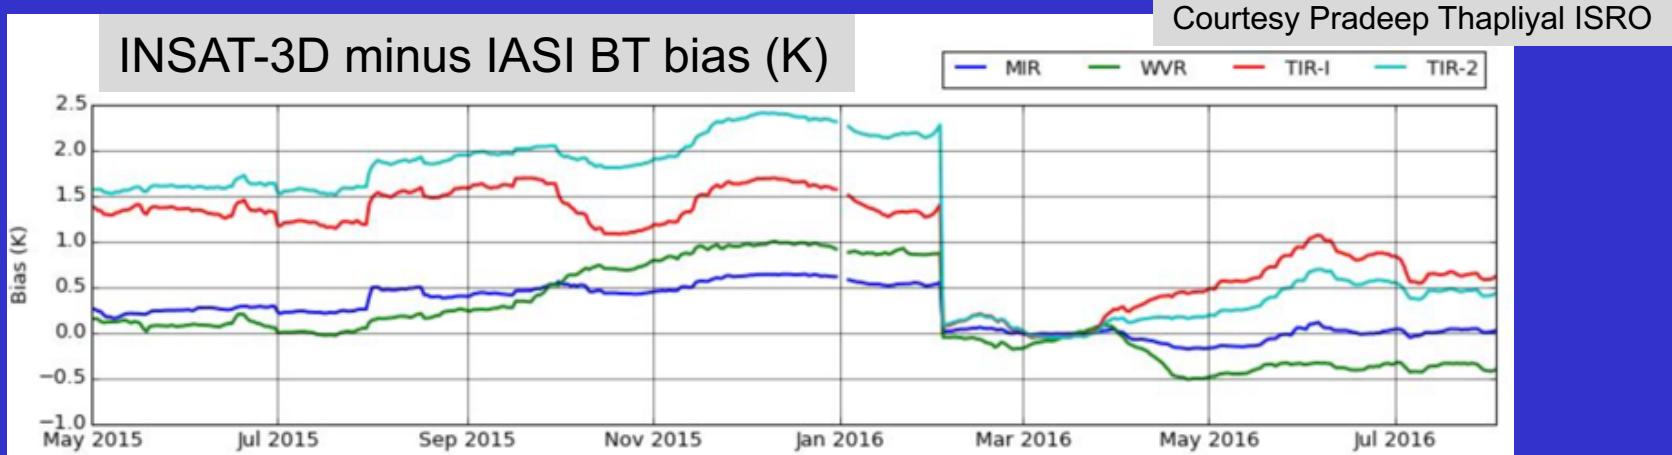

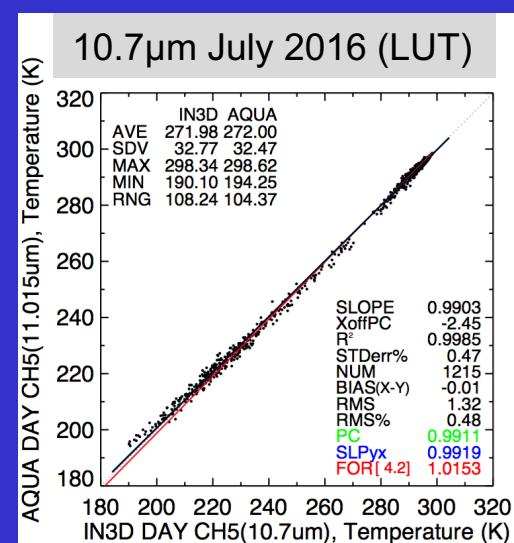

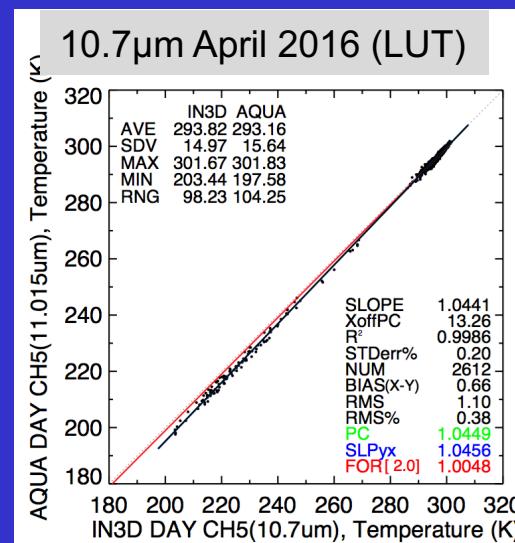

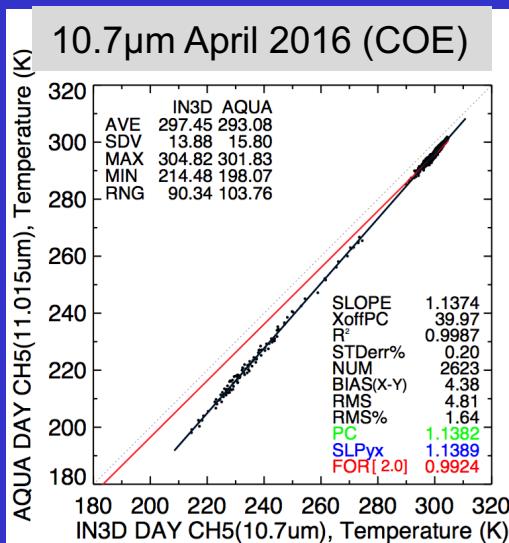

NASA Langley Research Center / Atmospheric Sciences

Scans FD half-hourly

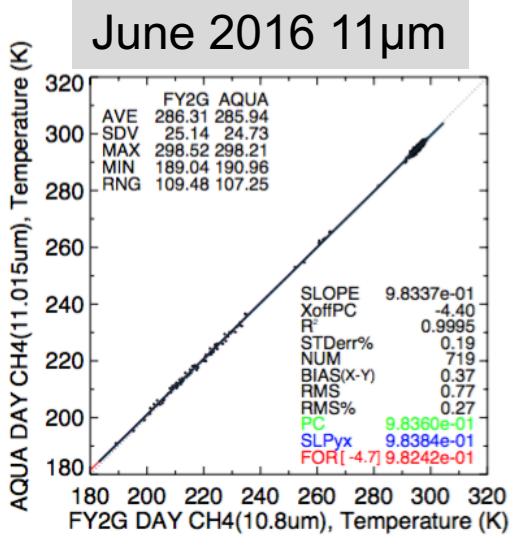

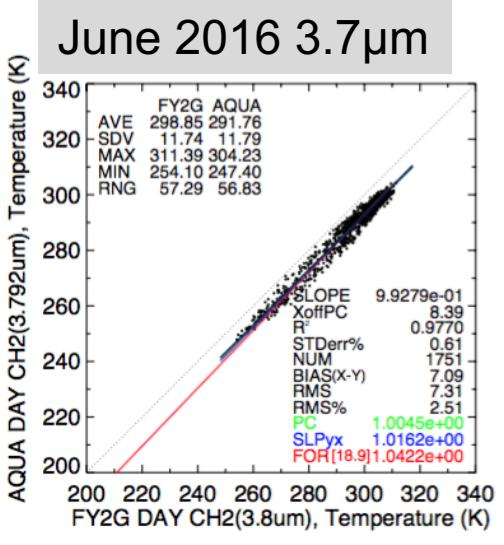

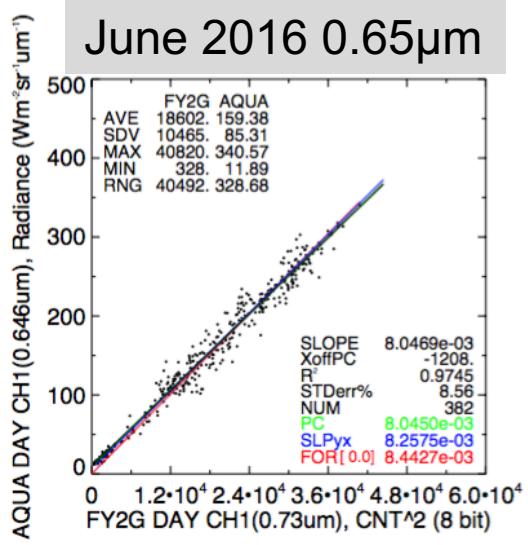

Indian Ocean INSAT-3D (82E) IR

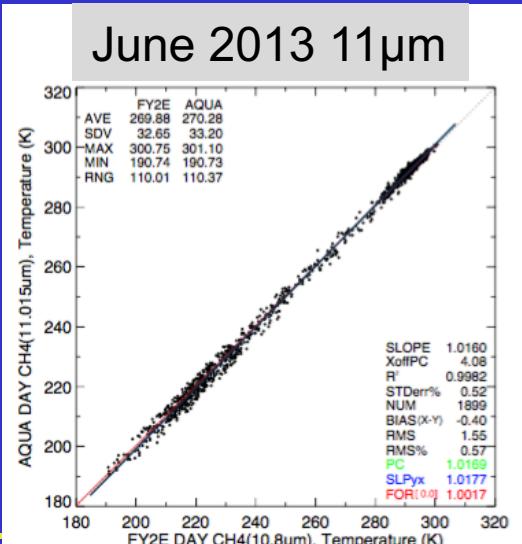

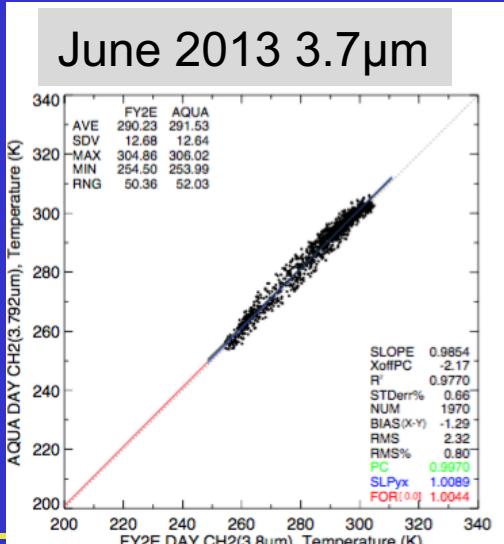

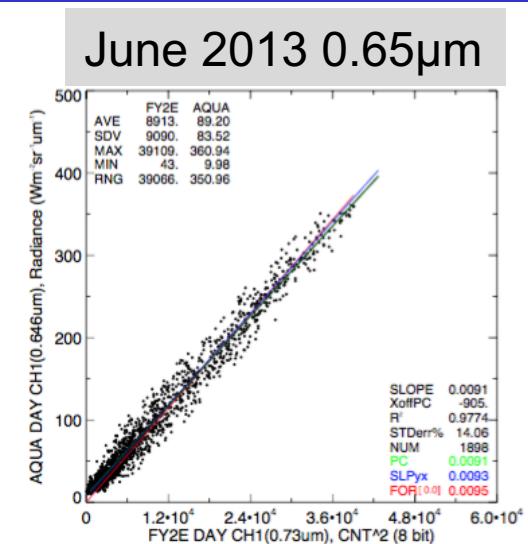

- Have worked with McIDAS and ISRO to implement new IR (LUT) coefficients and compared them to the old coefficients (COE).

Indian Ocean FY-2E(86E)/-2G(105E)

FY-2G/Aqua-MODIS

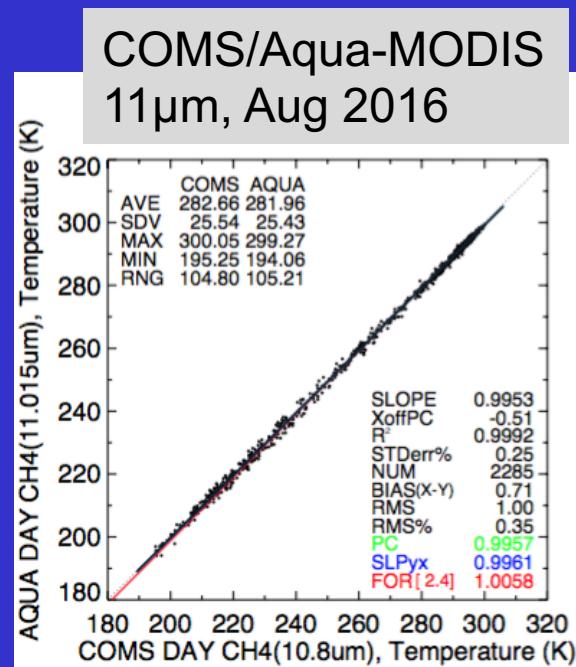

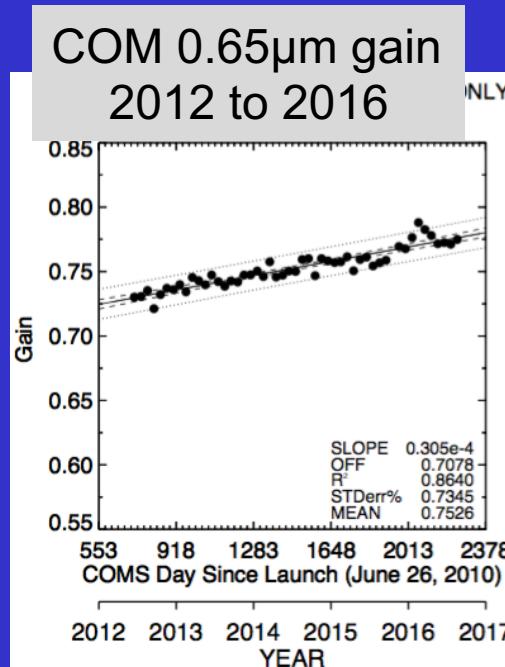

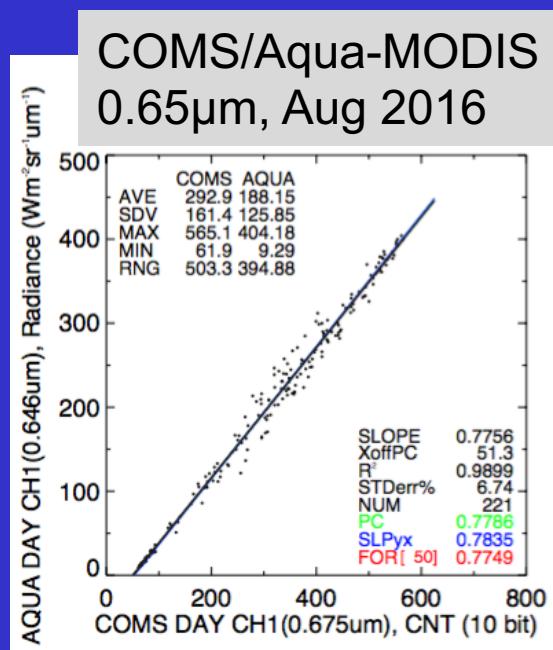

FY-2E/Aqua-MODIS

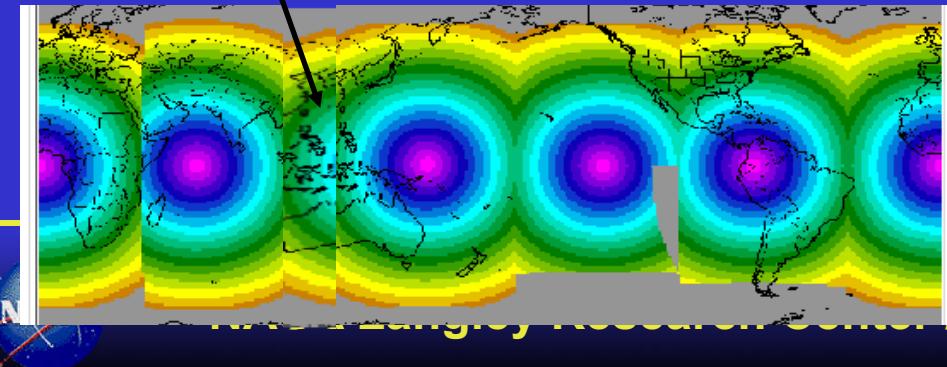

- The FY-2E/G visible sensor is noisy, the IR is noisy also but linear

COMS-1 (128E)

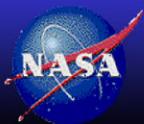

- COMS-1 is similar to GOES 8-12 and is well-calibrated
- Maybe fill in the small rectangle gap, but scan FD only every 3-hours

Scans FD 3-hourly, NH 15 minutes

Edition 4 GEO processing

- GEO 1-hourly imager and cloud retrievals processed through June 2015
- When Himawari-8 cloud retrievals have been validated with the cloud and SARB working groups continue processing through December 2016
 - Himawari-8 has replaced MTSAT-2 beginning in July 2015
 - Continue to use Met-7 until December 2016
- Beginning January 2017 use Met-8 over Indian Ocean
 - Met-7 will be decommissioned in Jan 2017

SW TERMINATOR FLUX ANOMALY

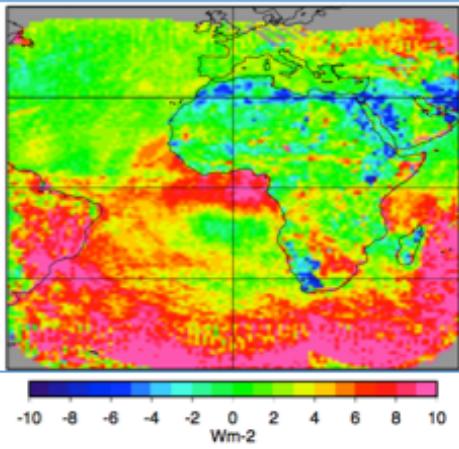

NASA Langley Research Center / Atmospheric Sciences

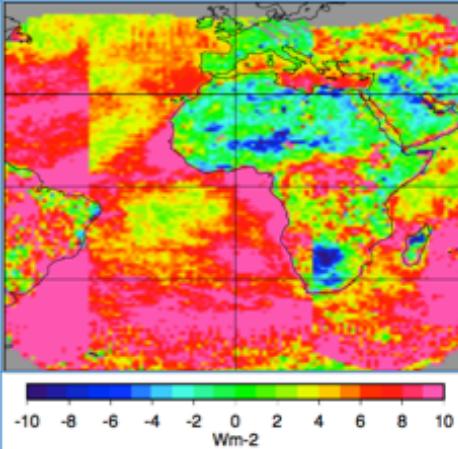

Validate the GEO SW ED4 fluxes with GERB

Dataset minus GERB monthly SW, Jan 2010

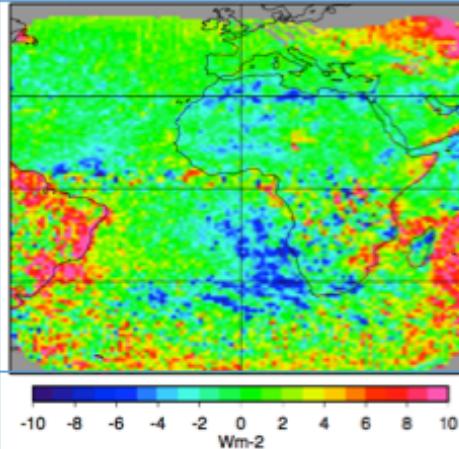

SYN1deg Ed4 GEO BB

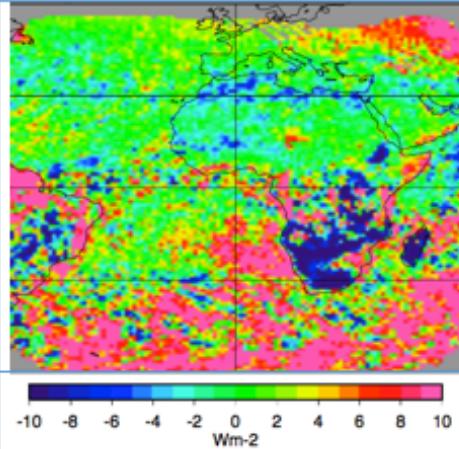

SYN1deg Ed4 computed

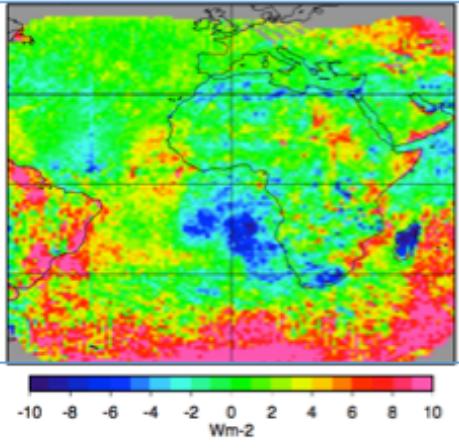

SSF1deg Terra+Aqua

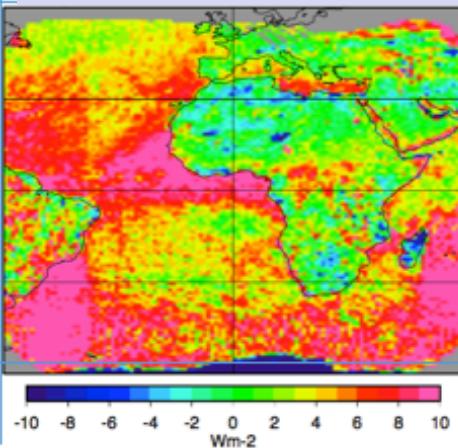

SSF1deg Terra-only

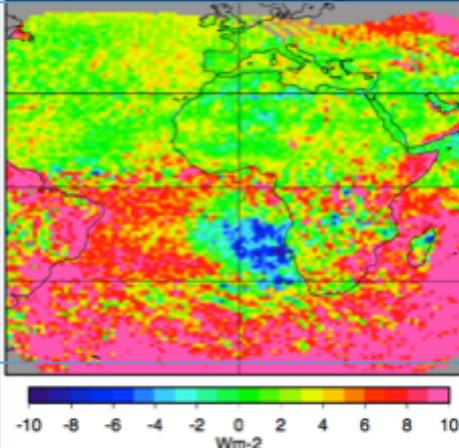

SYN1deg Ed3 GEO BB

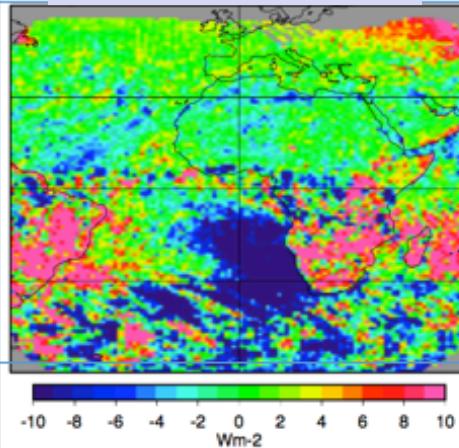

SYN1deg Ed3 computed

EBAF Ed2.8

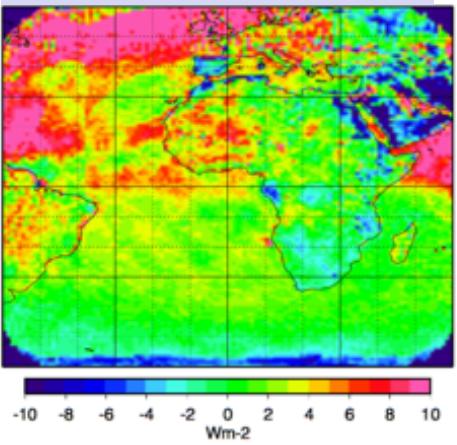

SSF1deg Aqua-only

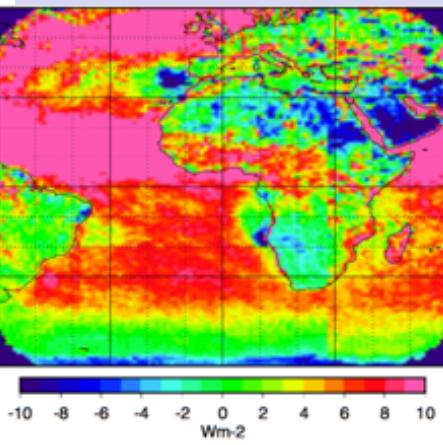

- SYN1deg GEO Ed4 overestimates the monthly SW flux w/r GERB, more than Ed3
- SSF1deg-Terra&Aqua is more similar to GERB

Dataset minus GERB monthly SW, July 2010

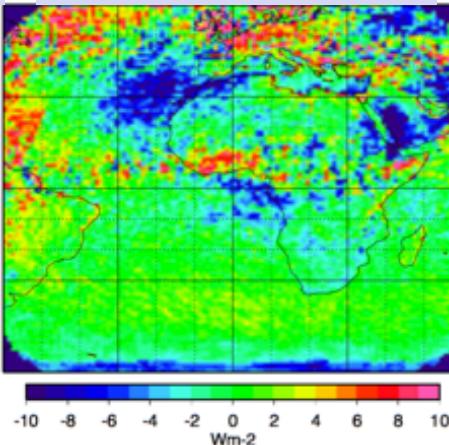

SYN1deg Ed4 GEO BB

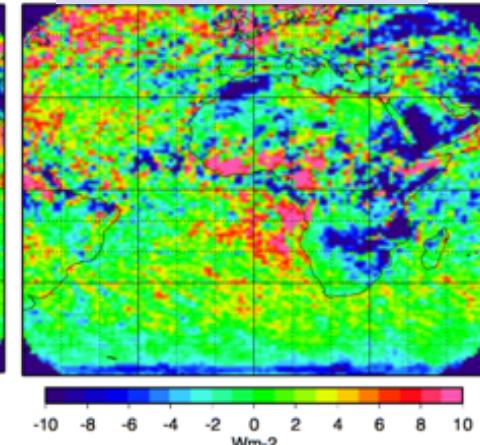

SYN1deg Ed4 computed

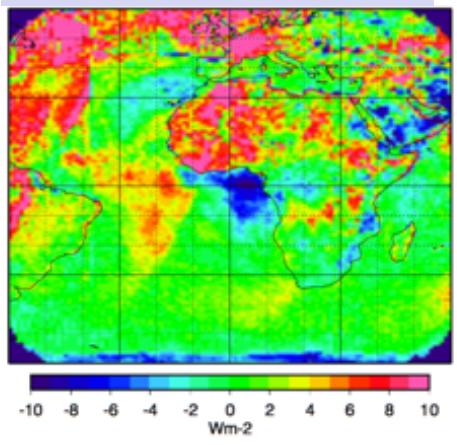

SSF1deg Terra+Aqua

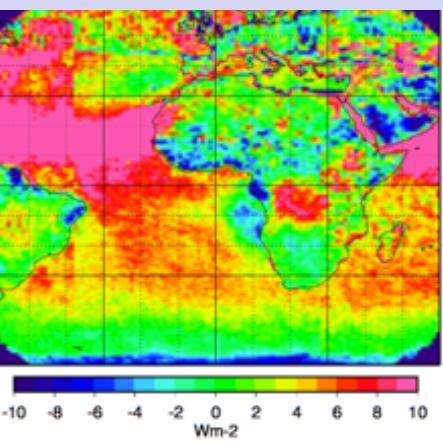

SSF1deg Terra-only

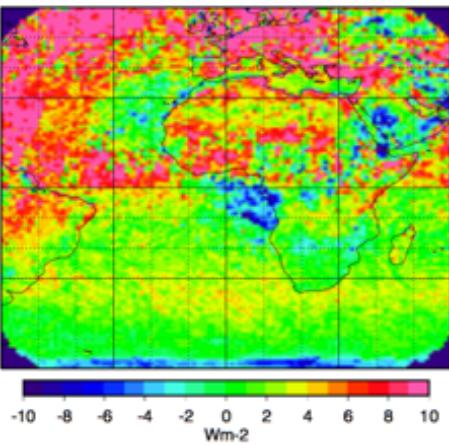

SYN1deg Ed3 GEO BB

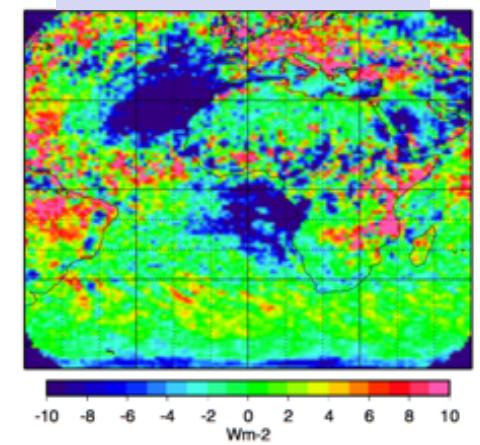

SYN1deg Ed3 computed

EBAF Ed2.8

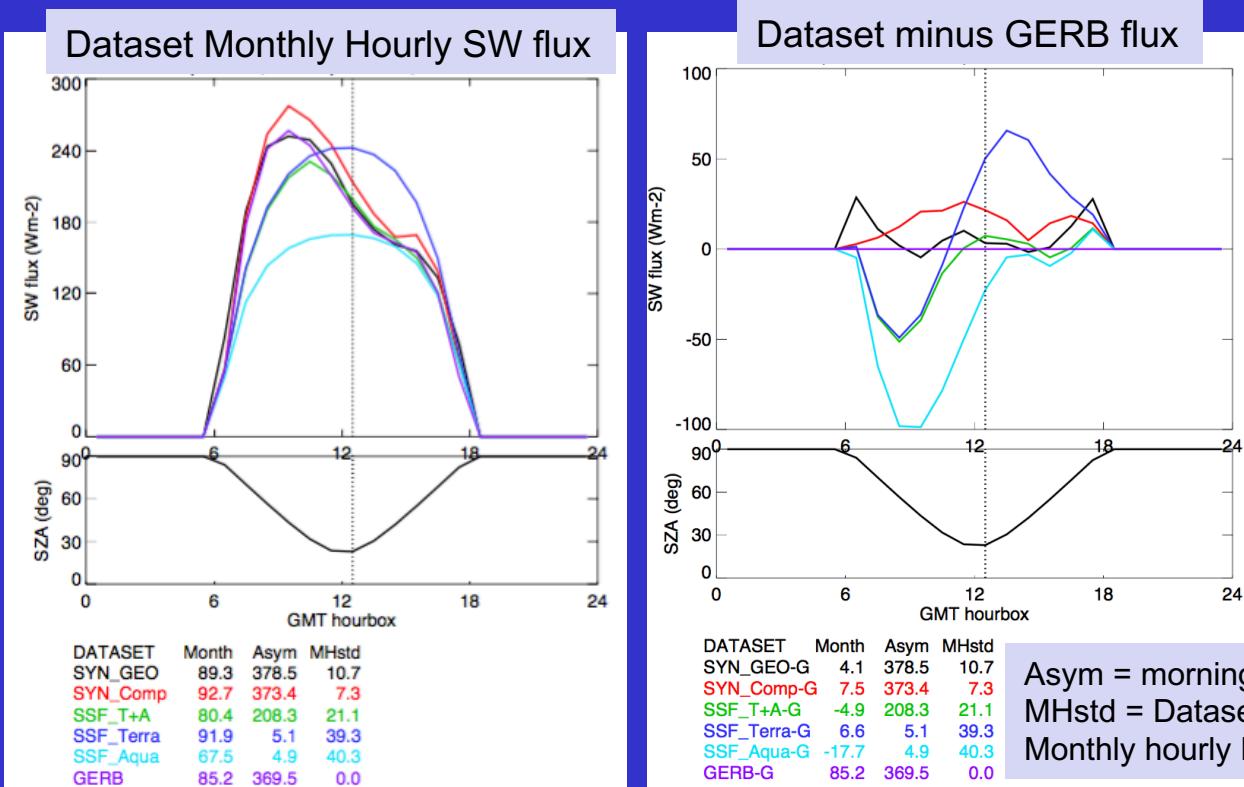

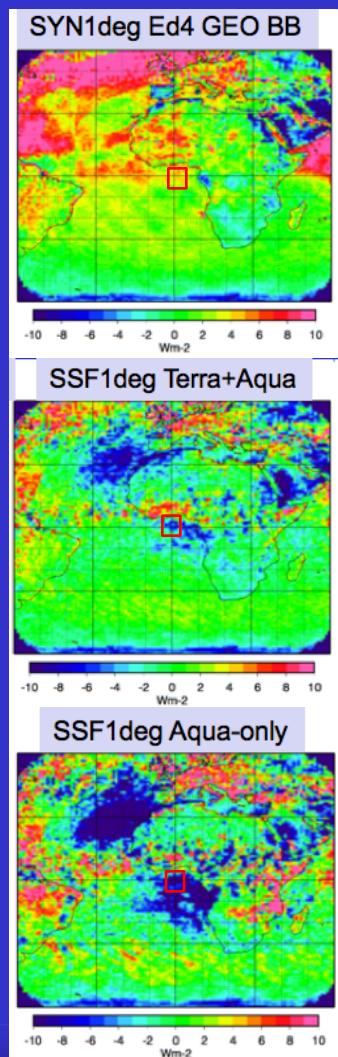

SSF1deg Aqua-only

- In SH the Terra (10:30) and Aqua (1:30) are further apart to better capture diurnal
- In NH Terra and Aqua are overpasses are closer in time than in SH

Monthly Hourly SW flux, (0N 0E) July 2010

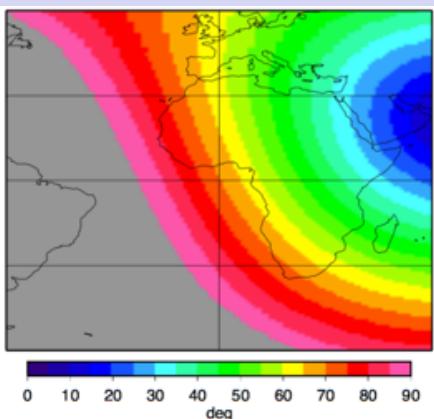

- SSF_Terra overestimates monthly SW flux by +7 Wm-2 of GERB
- SSF_Aqua underestimates monthly SW flux -18 Wm-2 of GERB
- SSF_Terra&Aqua underestimates monthly SW flux by -5 Wm-2 and only has half of the asymmetric flux of GERB
- SYN has same asymmetric flux, small MH RMS error, but monthly SW flux +4 Wm-2 of GERB, due to near terminator flux anomaly

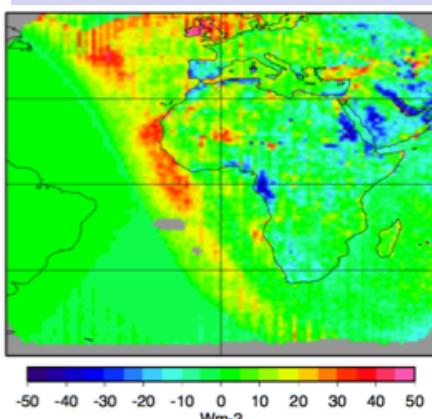

NA

Dataset minus GERB MH SW flux, July 2002

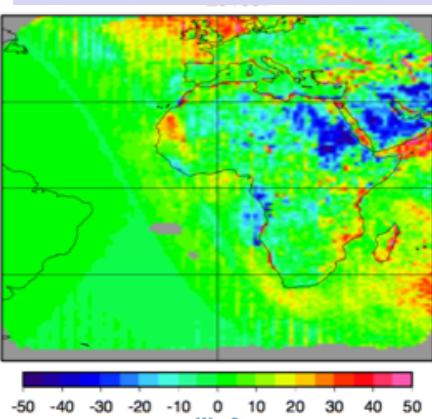

SZA, GMT=7

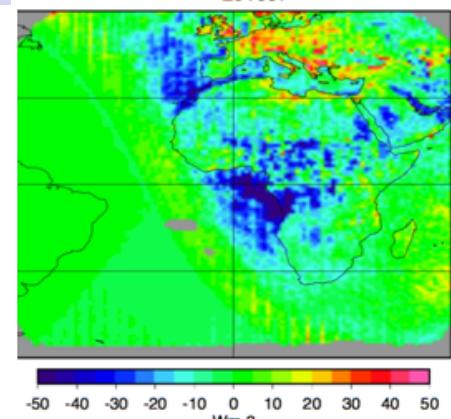

SYN-GEO, GMT=7

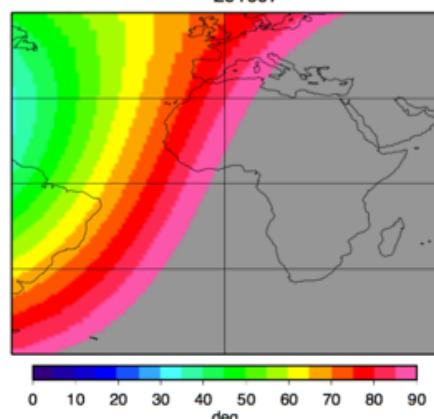

SYN-COMP, GMT=7

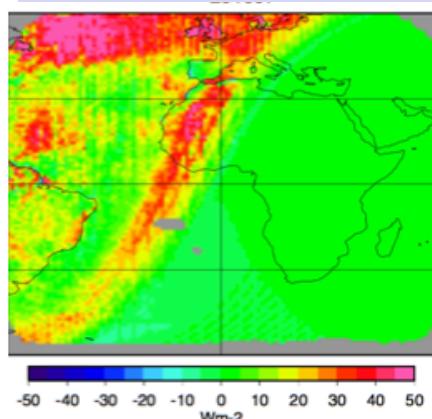

SSF-Terra&Aqua, GMT=7

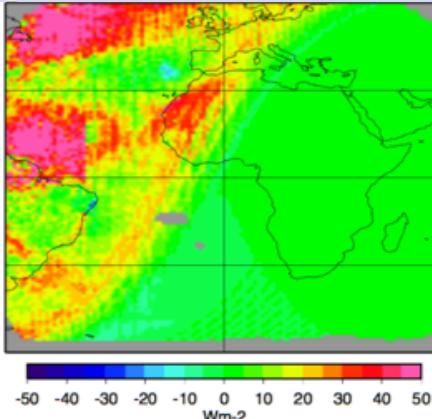

SZA, GMT=7

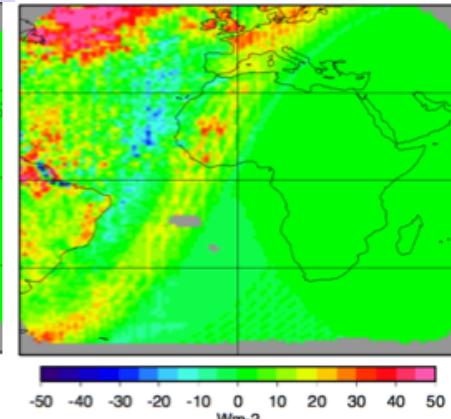

SYN-GEO, GMT=18

SYN-COMP, GMT=18

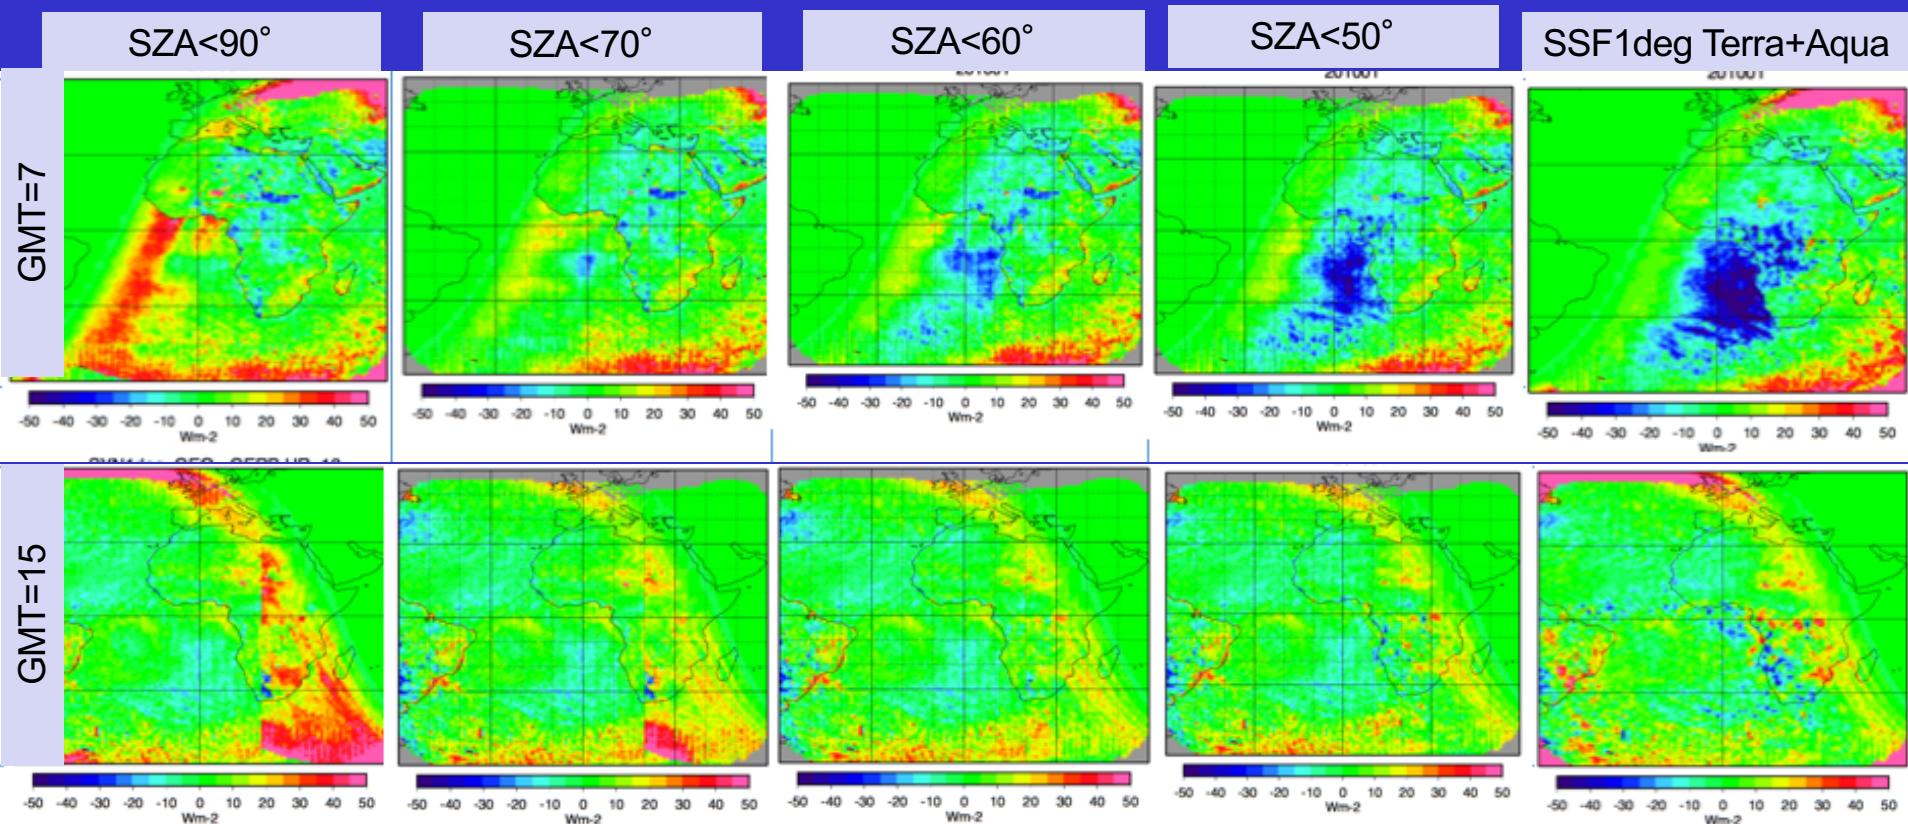

SSF-Terra&Aqua, GMT=18

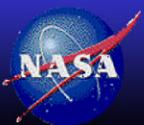

- Clearly the SYN-GEO has a near terminator flux anomaly
- Do not use GEO fluxes for SZA>threshold, and rely on directional models

Dataset minus GERB MH SW flux, Jan 2002

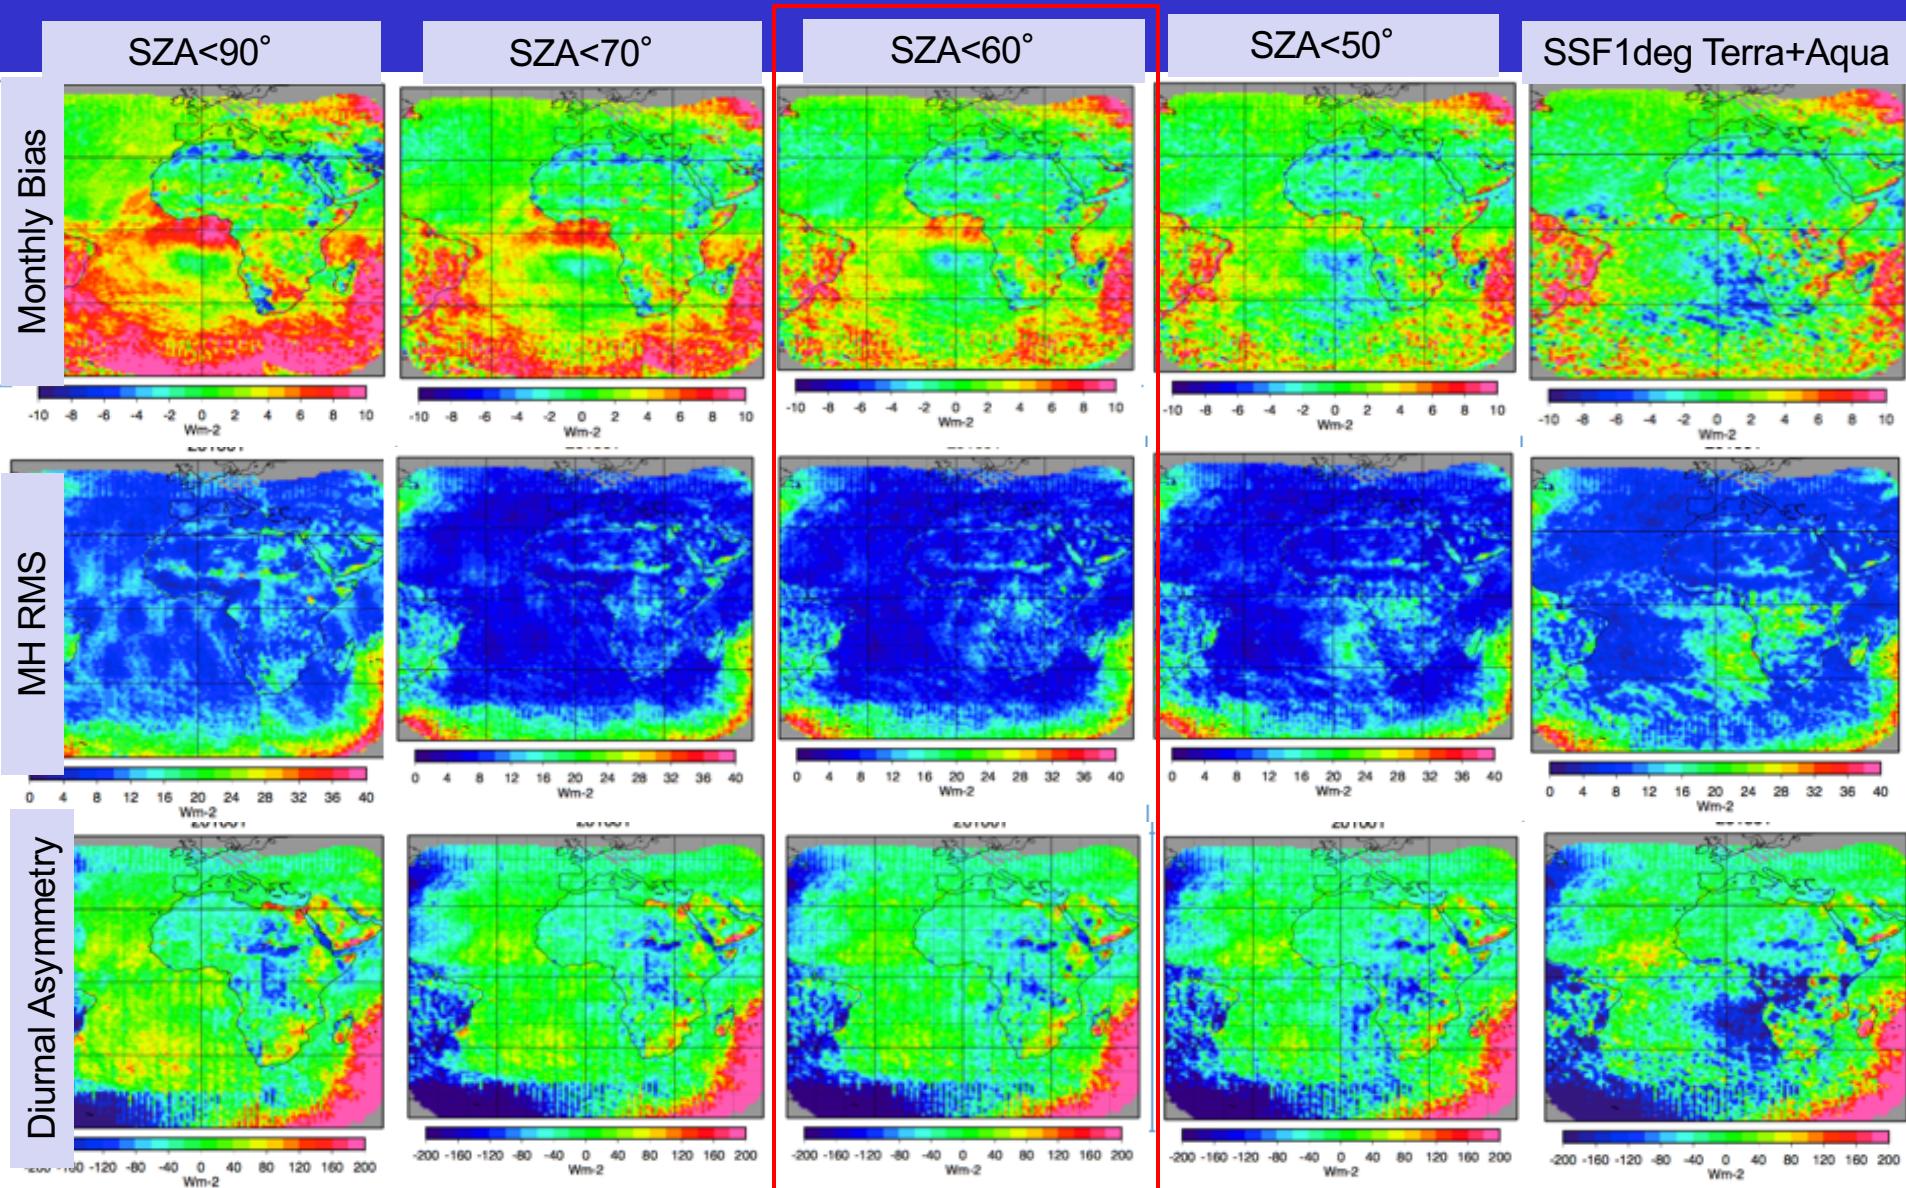

- The SZA threshold is a delicate balance between removing the GEO diurnal signal or the near terminator flux anomaly

NASA Langley Research Center / Atmospheric Sciences

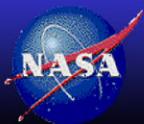

Dataset minus GERB, Jan 2002

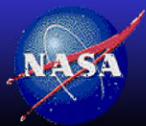

Near Terminator SW Flux Anomaly

- As a quick fix to release the SYN1deg Ed4 dataset, only use GEO BB fluxes where the SZA <60°
 - Rely on directional model
 - Do not need to rerun SYNI, since the untuned relies on the cloud properties only
 - Deliver the new TSI code, and rerun 15 years at DAAC
 - Rerun the SYN1deg code using existing SYNI and new TSI
- The Ed4 SW derived BB flux code is the same Ed3
 - However, the hourly GEO observations have reduced the time difference from 90 to 30 minutes when linearly regressing the CERES and GEO fluxes to normalize the GEO measurements to CERES
- TISA greatest priority will be to improve the GEO SW flux code
 - Evaluate the ADM, SW NB to BB, GEO/MODIS clouds, etc

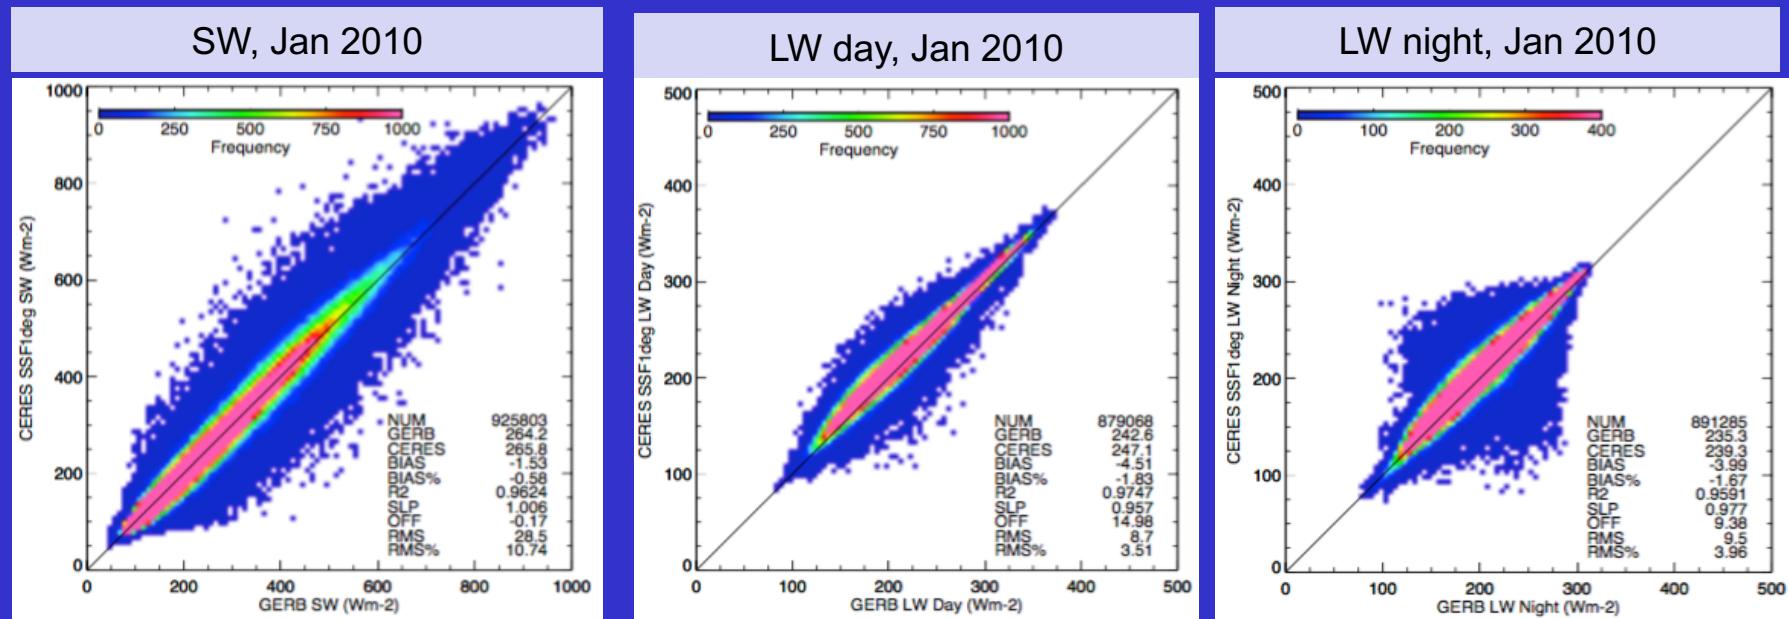

CERES/GERB COMPARISONS

NASA Langley Research Center / Atmospheric Sciences

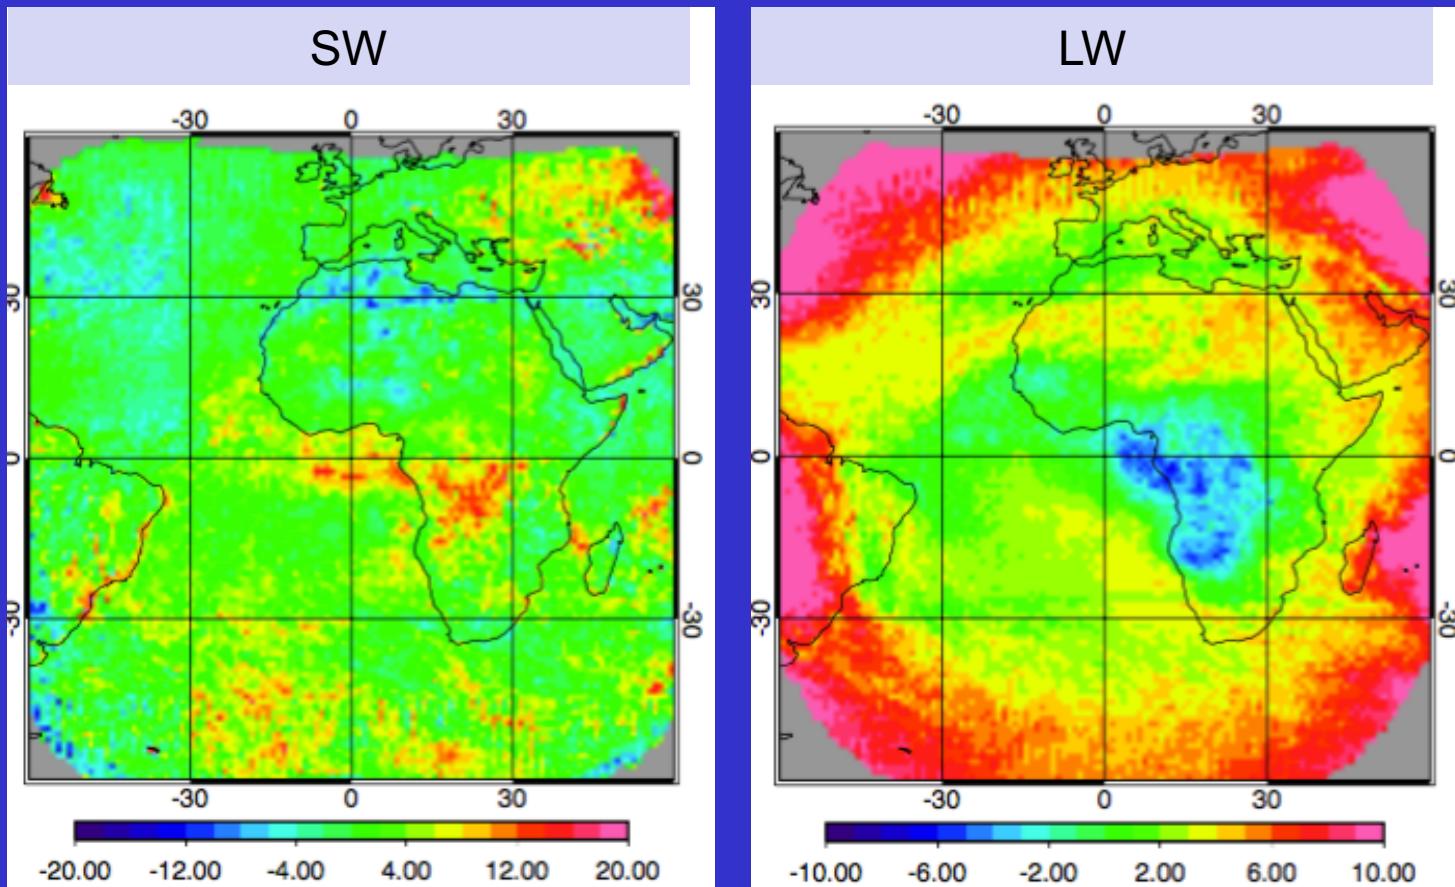

GERB and CERES coincident flux

CERES-GERB (%)	SW day	LW day	LW night
July 2004	+8.3	-2.3	-2.2
Jan 2005	+7.3	-2.6	-2.3
Jan 2010	-0.6	-1.8	-1.7
July 2010	-0.2	-1.7	-1.6
Jan 2012	-2.6	-1.8	-1.7
July 2012	-2.3	-1.6	-1.6
Jan 2016	+6.9	-2.0	-2.0

GERB 1&2: BARG Ed2
GERB3: BARG Ver999
CERES: Ed4

CERES – GERB regional bias, Jan 2005

- Use mean CERES/GERB regional monthly ratio to normalize GERB to CERES
- Use CERES/GERB regional monthly linear regression to normalize

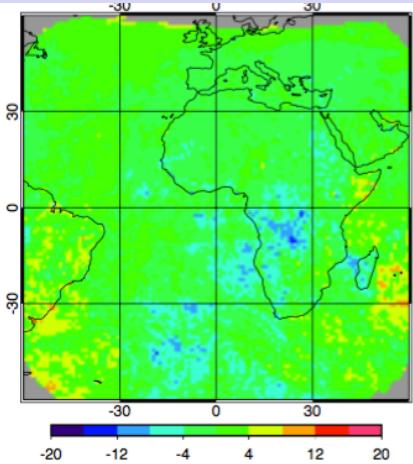

NASA Langley Research Center / Atmospheric Sciences

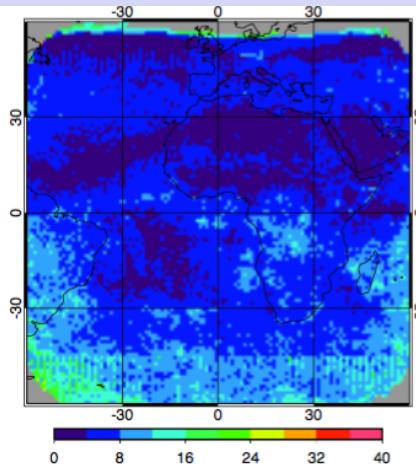

CERES – GERB SW, Jan 2010

SSF-T&A hourly
RMS=23.2%

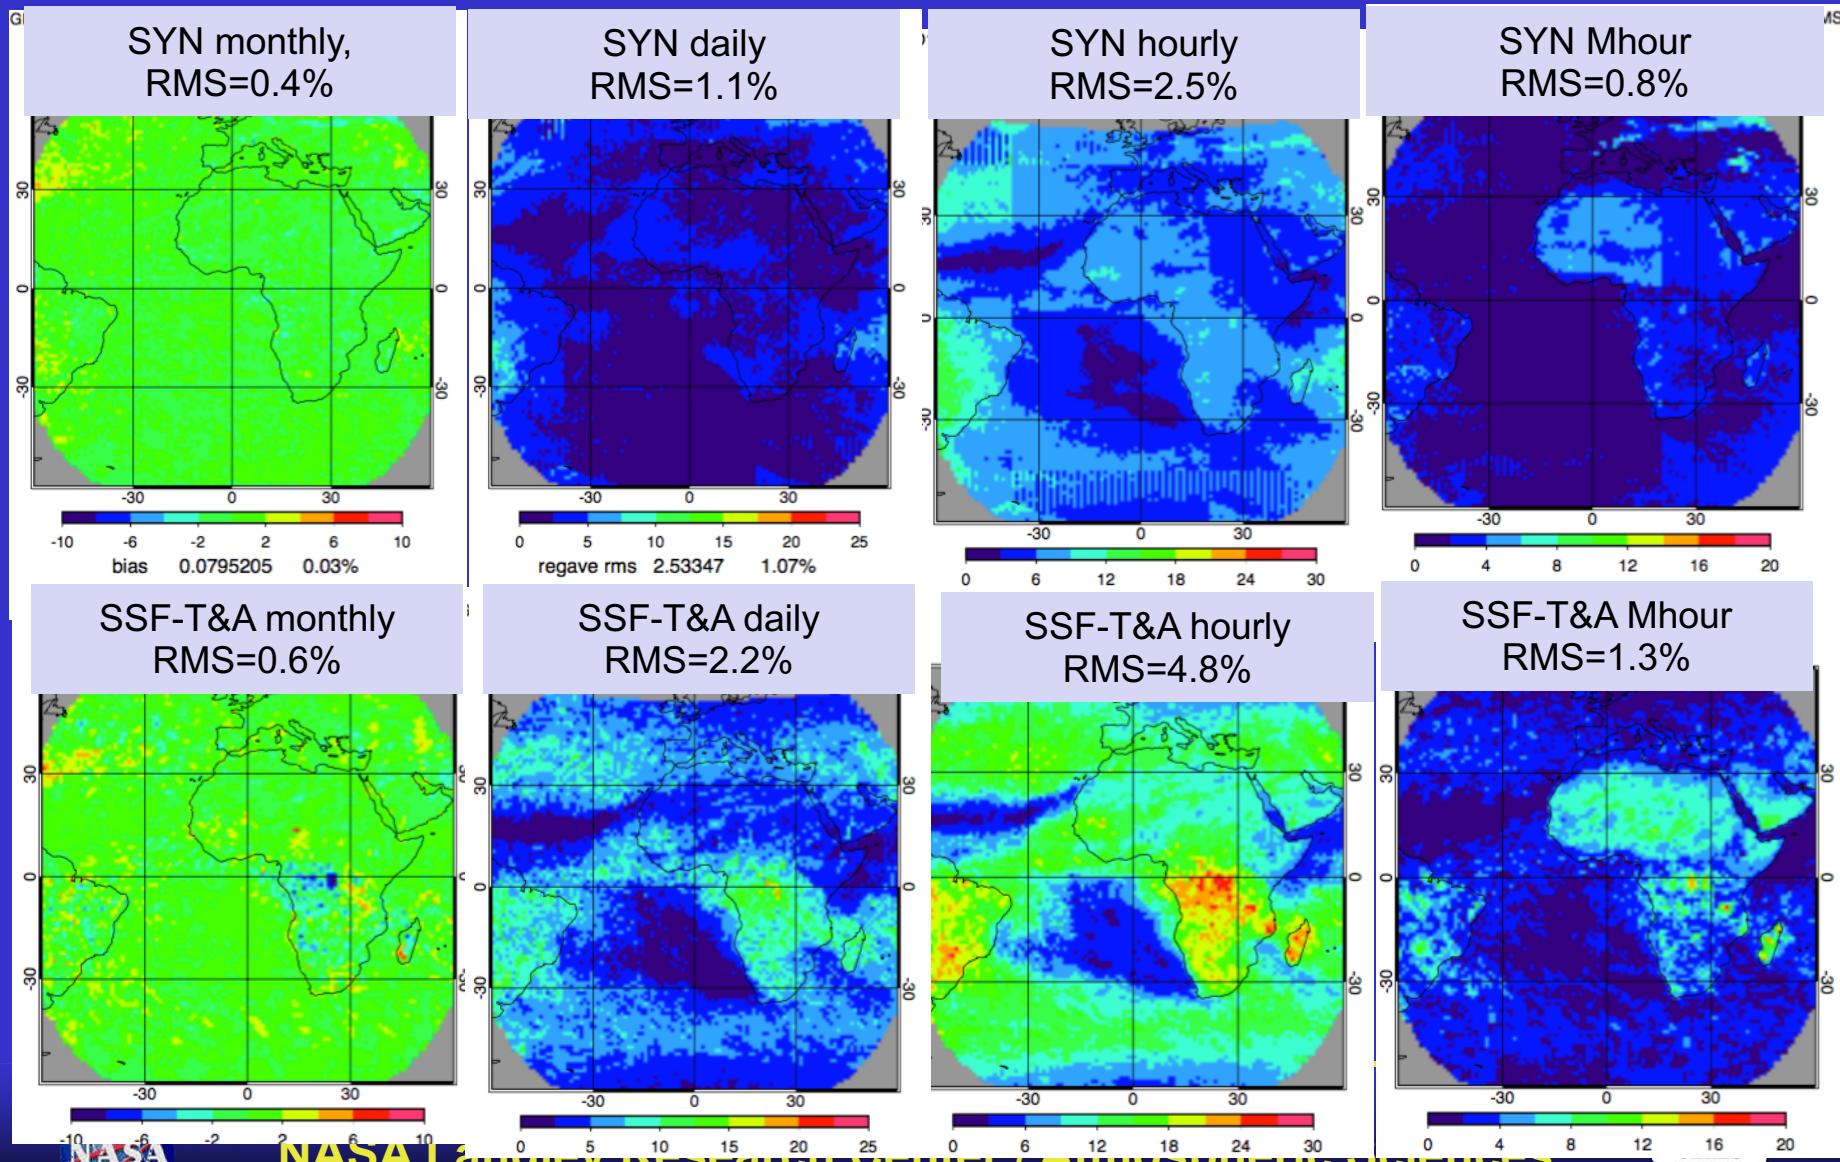

SSF-T&A Mhour
RMS=9.0%

NASA Langley Research Center / Atmospheric Sciences

CERES – GERB LW, Jan 2010

NASA Langley Research Center / Atmospheric Sciences

CERES – GERB SW Comparisons

SYN/SSF_TA

RMS %	Bias	Monthly	Daily	1hour	M1hour
Jul 2004	-0.6/-1.8	3.5/4.5	6.3/11.3	17.0/23.1	7.6/9.1
Jan 2005	-0.8/-1.6	3.5/4.2	6.3/10.2	17.4/23.2	7.5/8.7
Jan 2010	-0.5/-1.3	2.9/3.7	5.9/10.4	17.0/23.2	6.9/8.2
Jul 2010	-1.5/-2.6	4.4/5.0	6.7/11.4	17.3/23.4	8.2/9.6
Jan 2012	1.1/0.2	2.9/3.0	6.6/10.4	18.0/23.5	6.8/7.7
Jul 2012	1.5/0.4	4.7/4.7	6.8/11.4	17.4/23.1	8.0/9.1
Jan 2016	-0.8/-1.3	2.9/3.3	6.0/9.5	17.0/22.7	6.9/8.1

- The SYN product is an improvement over using SSF Terra+Aqua, especially for higher spatial resolutions
- Daily, hourly, and M1hour RMS errors reduced by 40%, 25% and 15% compared to SSF_TA %, respectively.

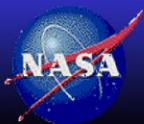

CERES – GERB SW Comparisons

SYN/SYN_terminator_flux

RMS %	Bias	Monthly	Daily	1hour	M1hour
Jul 2004	-0.6/1.1	3.5/4.2	6.3/6.0	17.0/17.5	7.4/9.4
Jan 2005	-0.8/1.1	3.5/3.9	6.3/5.9	17.4/17.6	7.5/9.3
Jan 2010	-0.5/1.4	2.9/3.5	5.9/5.6	17.0/17.4	6.9/9.2
Jul 2010	-1.5/0.2	4.4/4.5	6.7/6.2	17.3/17.4	8.2/10.0
Jan 2012	1.1/3.1	2.9/4.6	6.6/6.9	18.0/18.7	6.8/9.4
Jul 2012	1.5/3.3	4.7/6.0	6.8/7.0	17.4/18.1	8.0/10.3
Jan 2016	-0.8/1.3	2.9/3.4	6.0/5.6	17.0/17.1	6.9/8.6

- The SYN terminator flux increased the regional monthly flux bias and the monthly hourly flux RMS, which was even greater than the SSF Terra+Aqua

CERES – GERB LW Comparisons

SYN/SSF_TA

RMS%	Bias	Monthly	Daily	1hour	M1hour
Jul 2004	-0.0/0.1	0.4/0.6	1.0/1.8	2.2/3.8	0.7/1.1
Jan 2005	-0.0/0.1	1.1/1.1	1.2/2.3	2.6/4.8	0.8/1.3
Jan 2010	0.0/0.1	0.4/0.6	1.1/2.2	2.5/4.8	0.8/1.3
Jul 2010	-0.0/0.1	0.3/0.5	1.0/1.8	2.9/3.9	0.7/1.1
Jan 2012	0.0/0.1	0.4/0.5	1.3/2.2	2.8/4.5	0.9/1.2
Jul 2012	-0.0/0.1	0.3/0.5	1.0/1.8	2.2/3.8	0.7/1.1
Jan 2016	-0.2/0.1	1.2/1.2	1.2/2.2	2.7/4.8	1.0/1.2

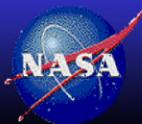

- The SYN product is an improvement over using SSF Terra+Aqua, especially for higher spatial resolutions
- Monthly, Daily, hourly and M1hour RMS errors reduced by 30%, 45%, 45% and 15%, respectively, compared to SSF_TA
- The GEO LW is based on IR and WV NB2BB and not dependent on clouds

GERB and CERES Comparison Conclusions

Ed3 from Doelling et al. 2013

RMS %	SW month	SW daily	LW month	LW daily
Ed3	3.5	7.8	0.5	1.9
Ed4	3.5	6.3	0.4	1.1

- SYN Ed4 is an improvement over Ed3, especially for LW
- The LW is now includes the GEO WV channel and does not use GEO clouds, does not use TRMM ADM
- SW improvements due to hourly GEO rather than 3-hourly and 4-channel clouds, algorithms remained the same

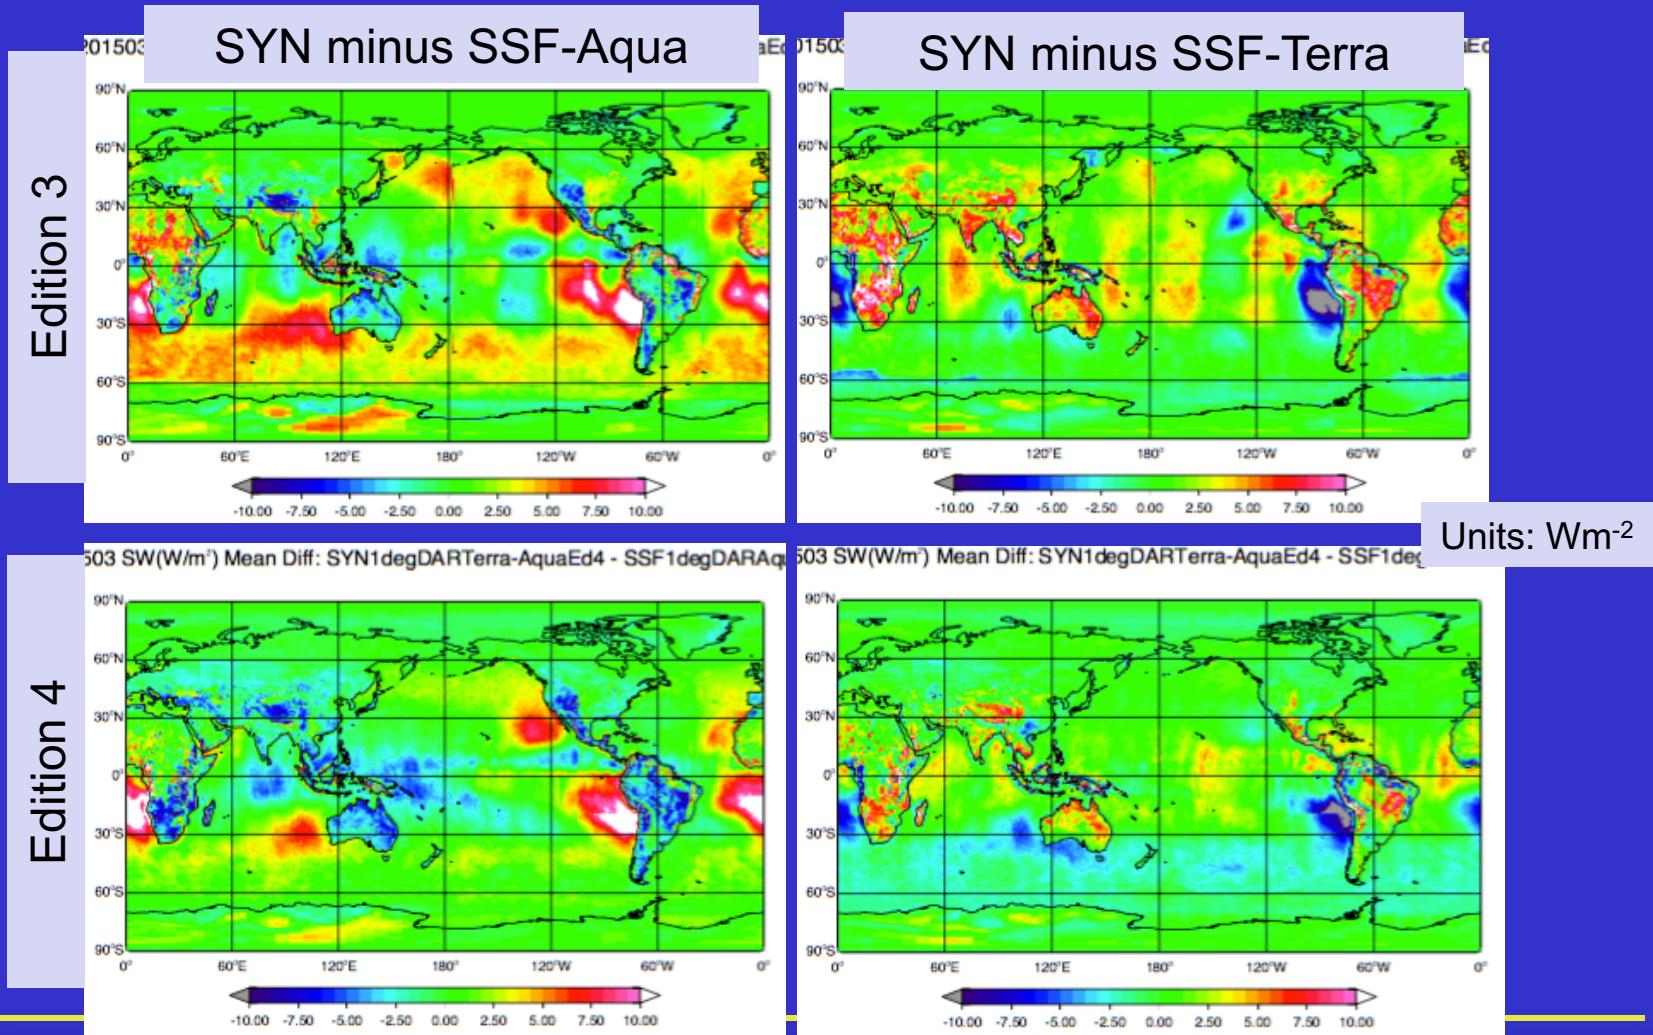

ED4 AND ED3 SYN1DEG TREND ANOMALIES

NASA Langley Research Center / Atmospheric Sciences

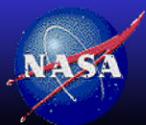

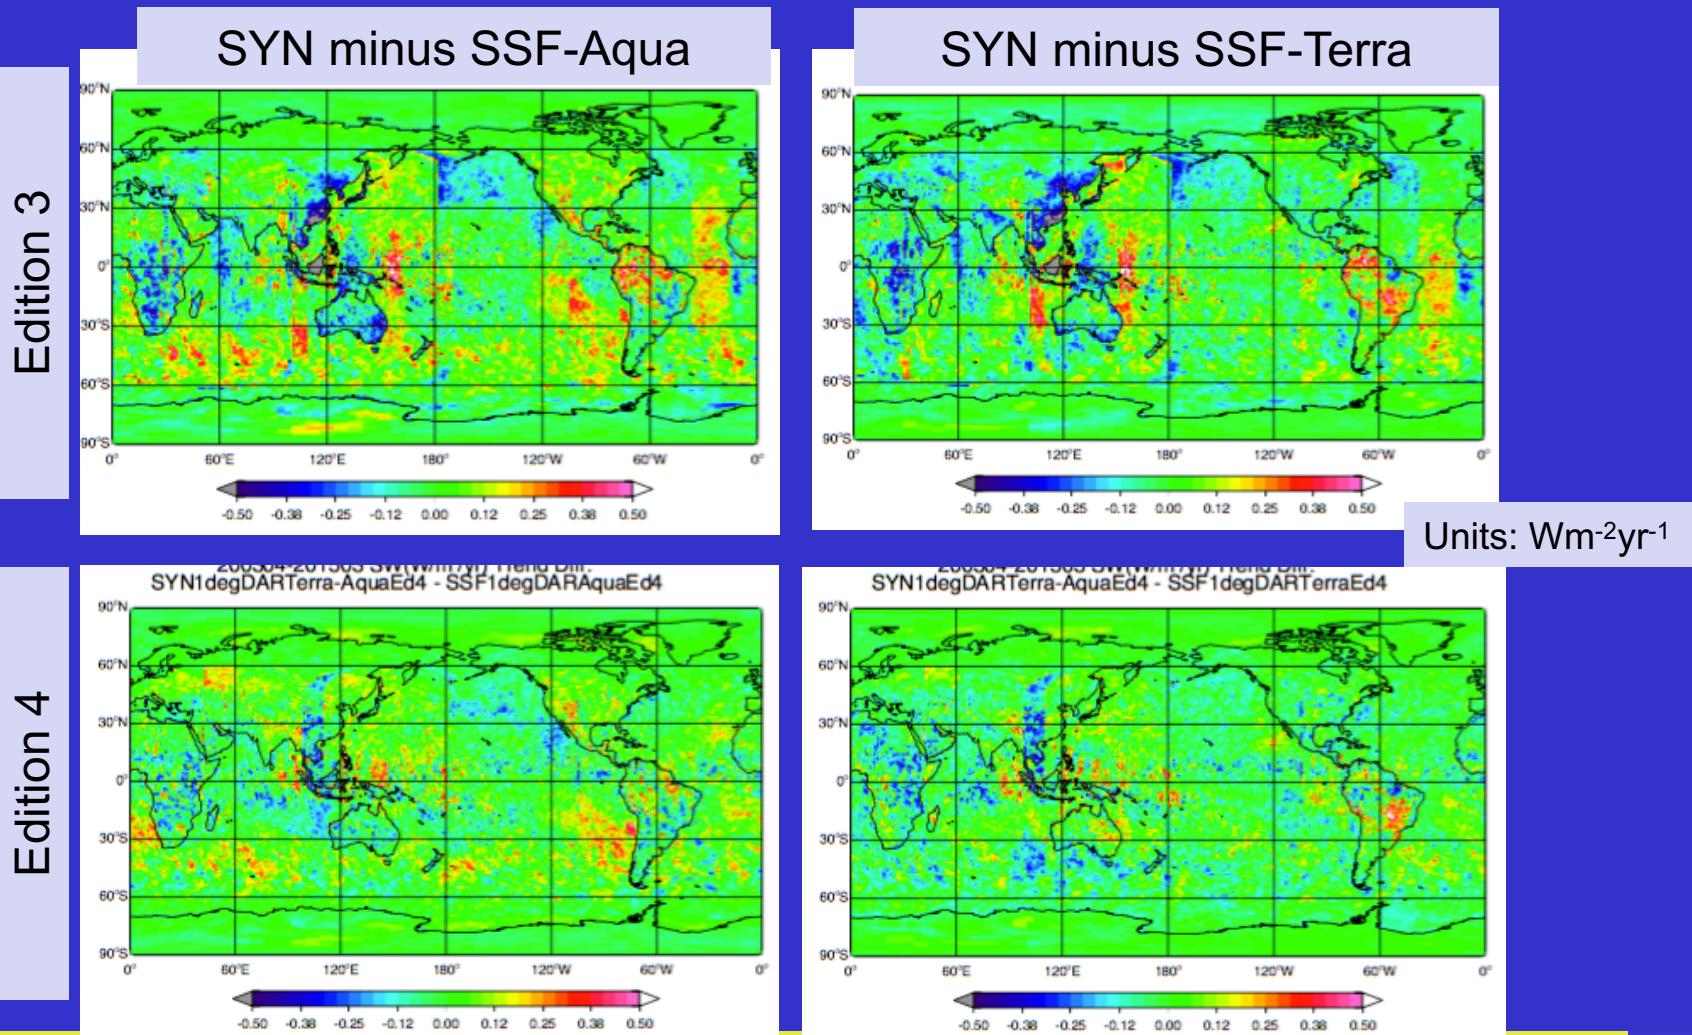

SYN – SSF 12-year SW flux difference

NASA Langley Research Center / Atmospheric Sciences

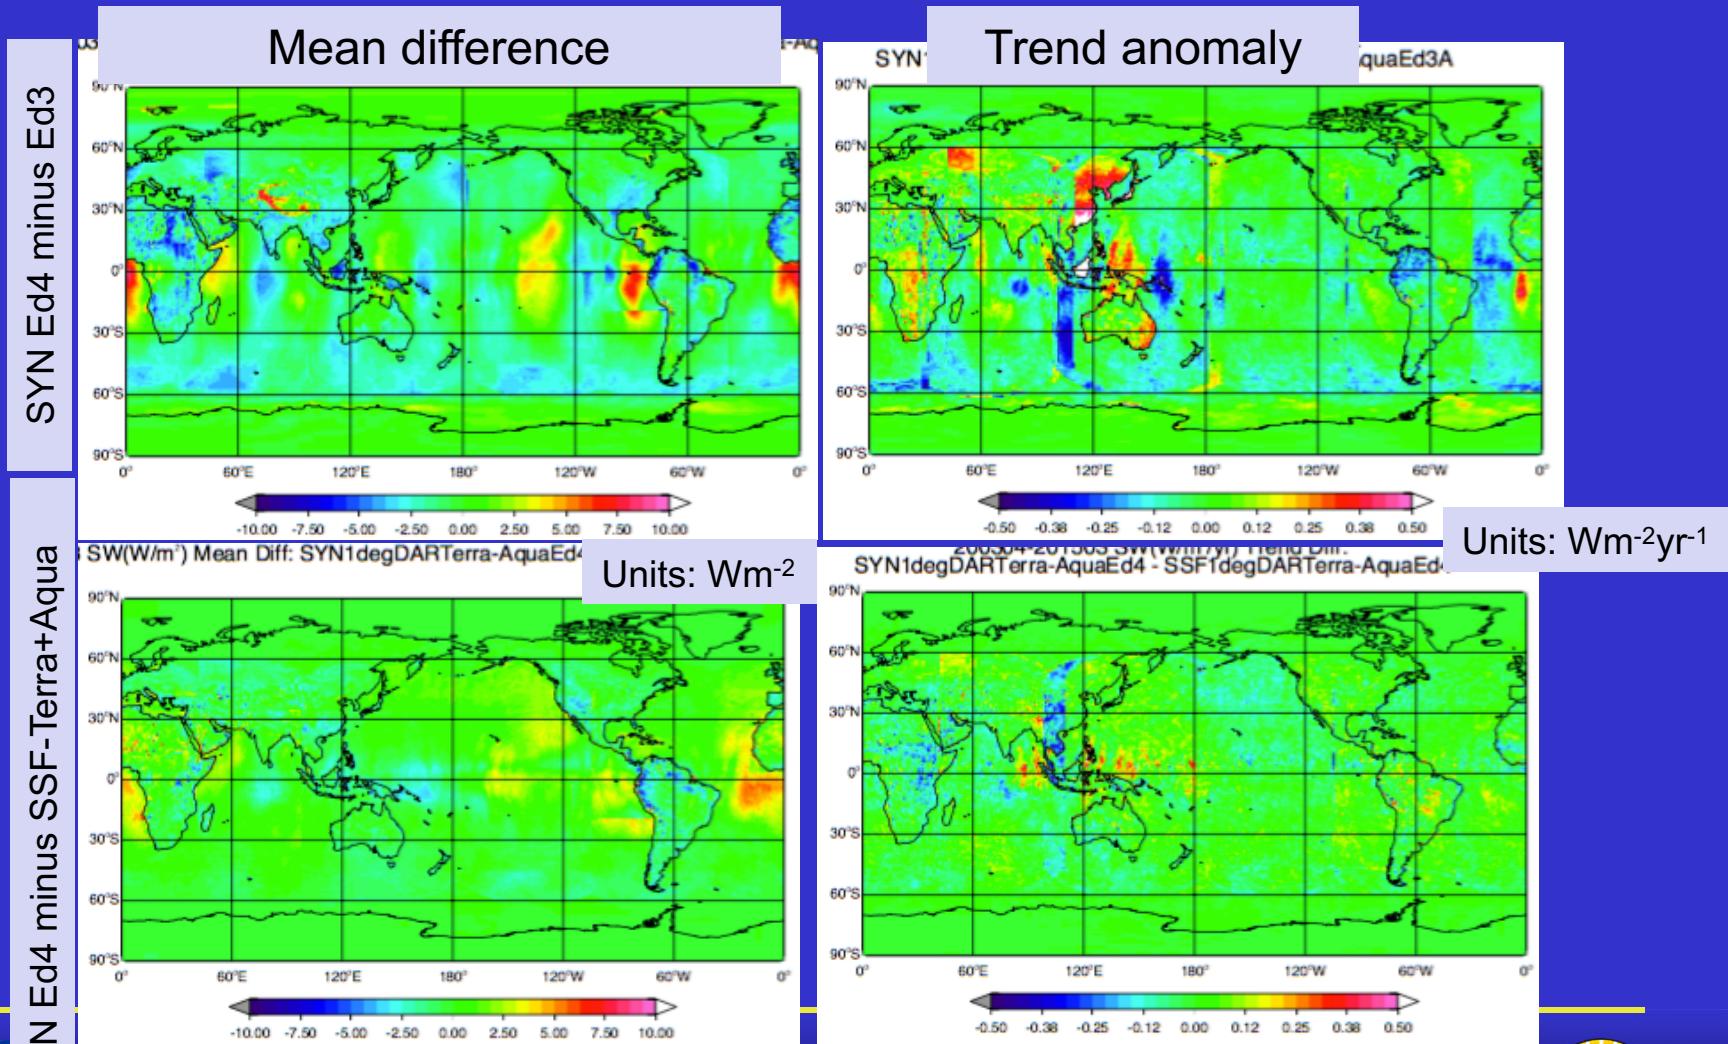

SYN – SSF SW regional trend anomalies

NASA Langley Research Center / Atmospheric Sciences

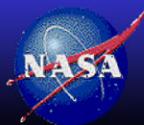

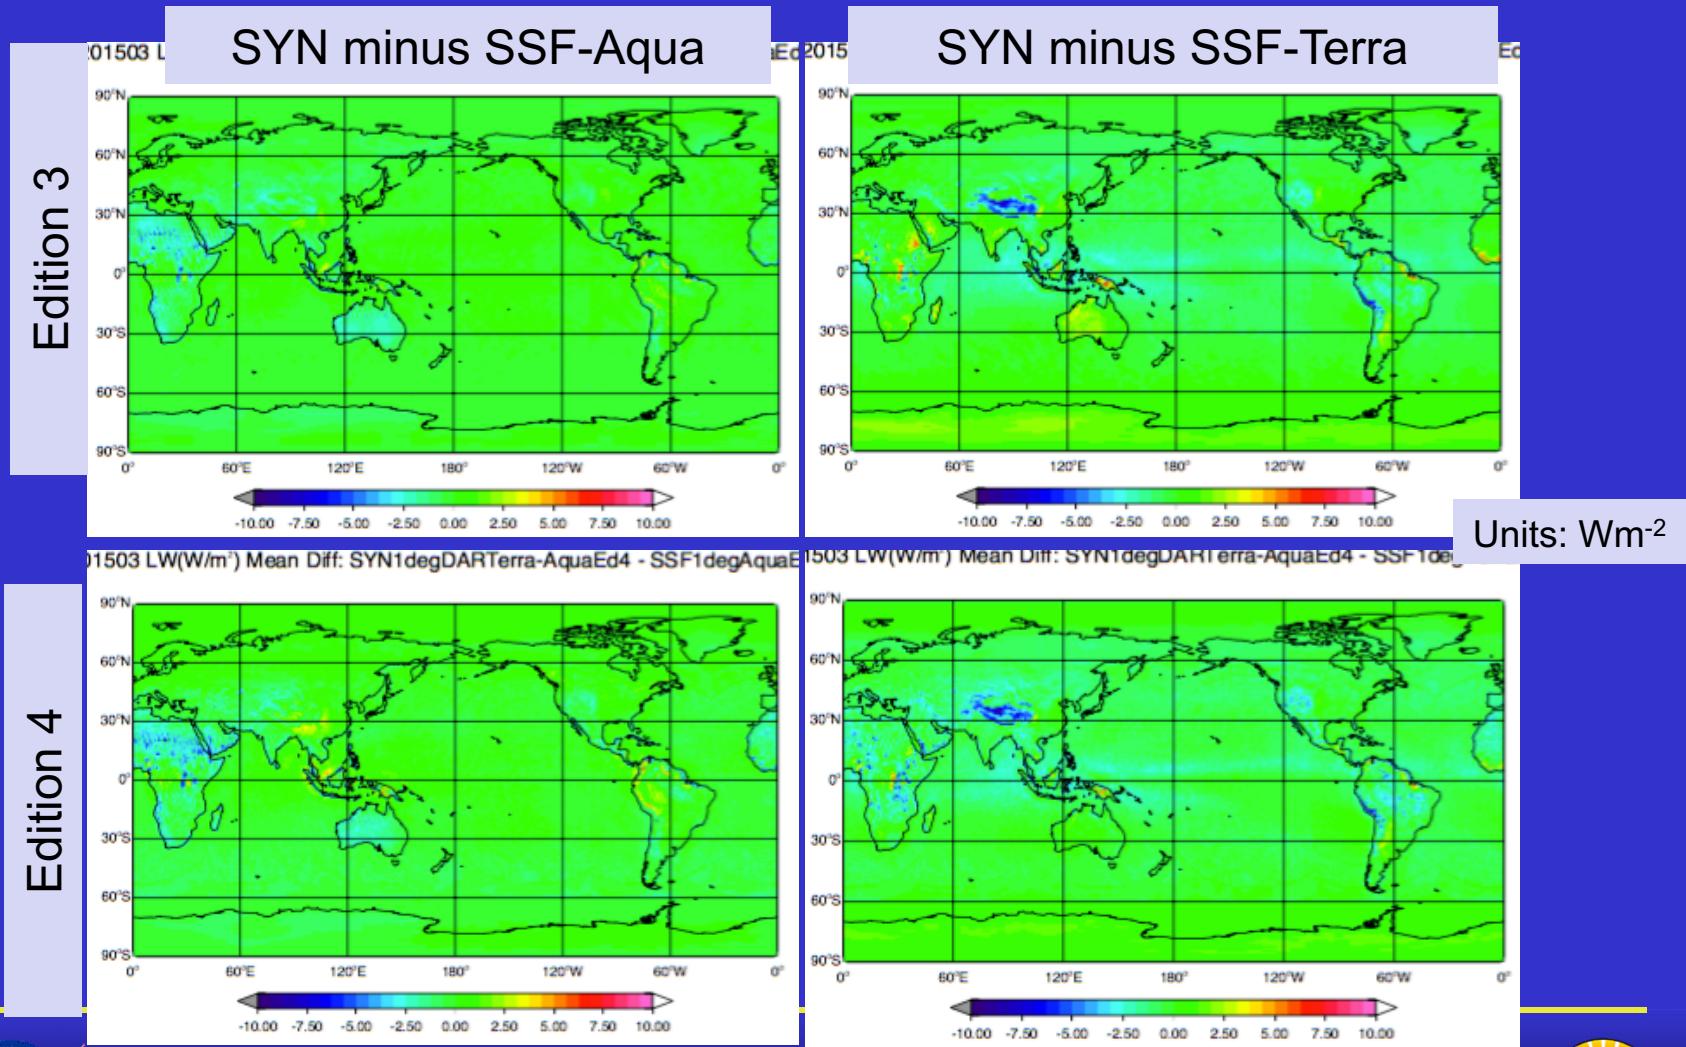

SYN Ed4 SW flux comparisons

NASA Langley Research Center / Atmospheric Sciences

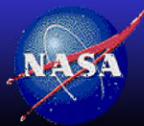

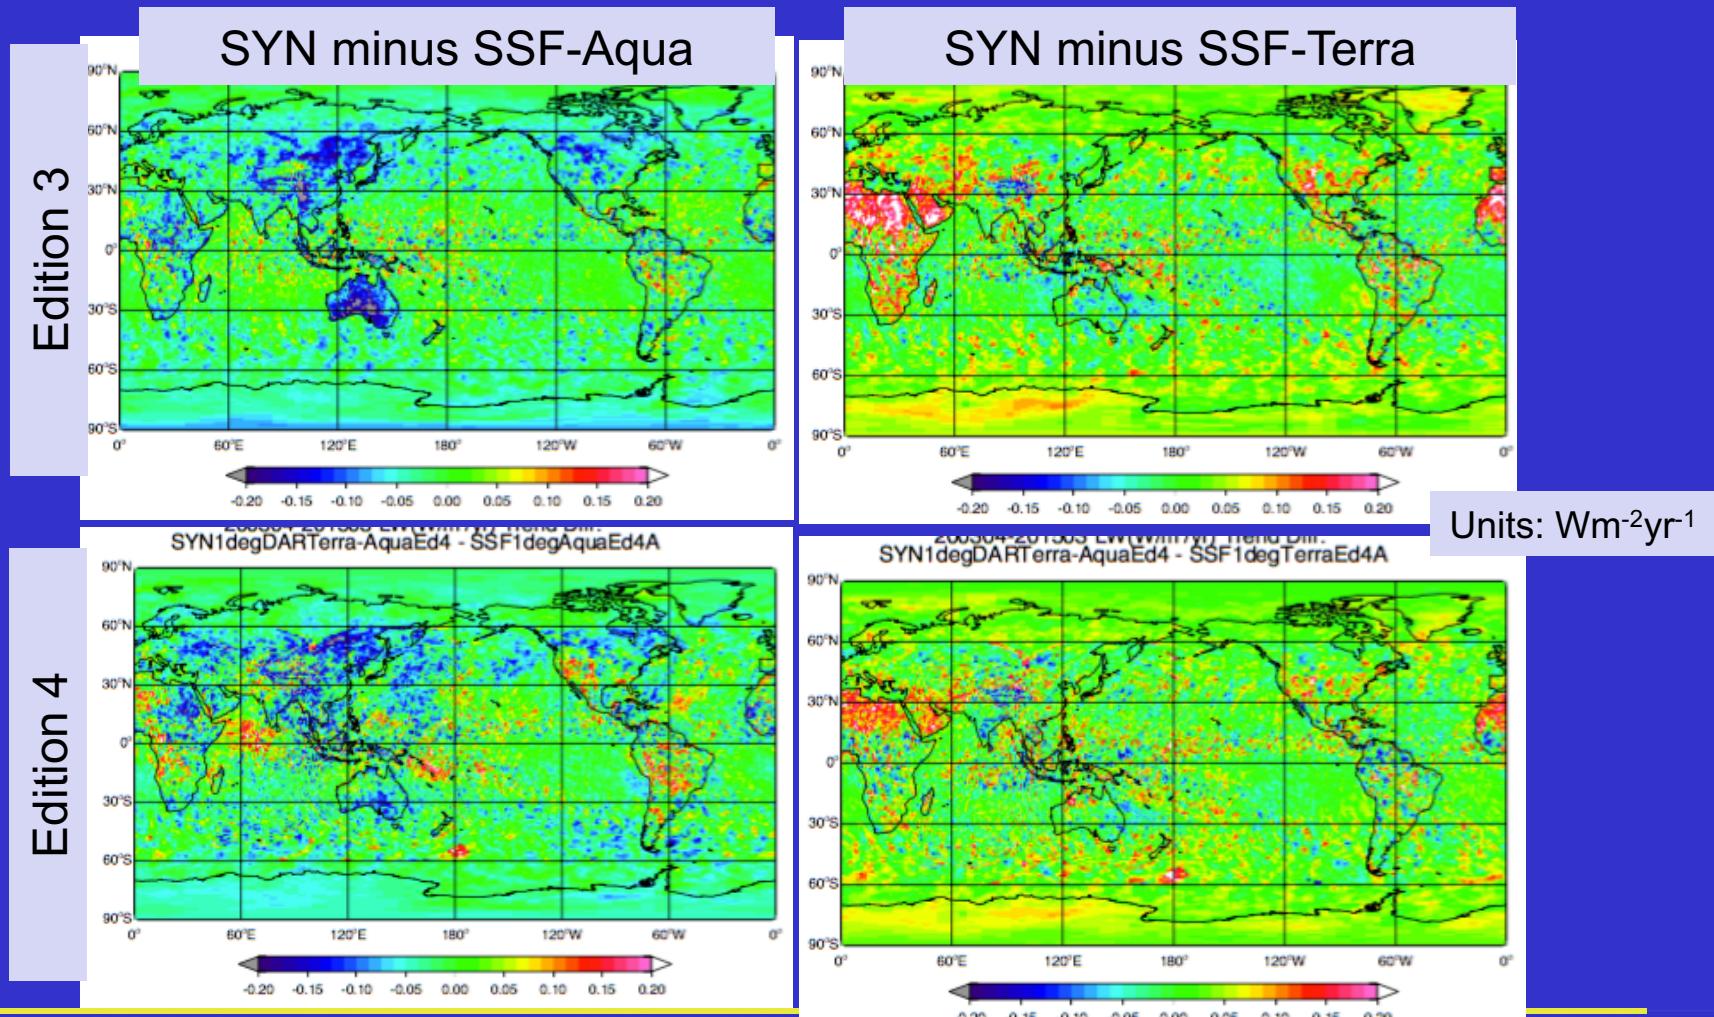

SYN – SSF 12-year LW flux difference

NASA Langley Research Center / Atmospheric Sciences

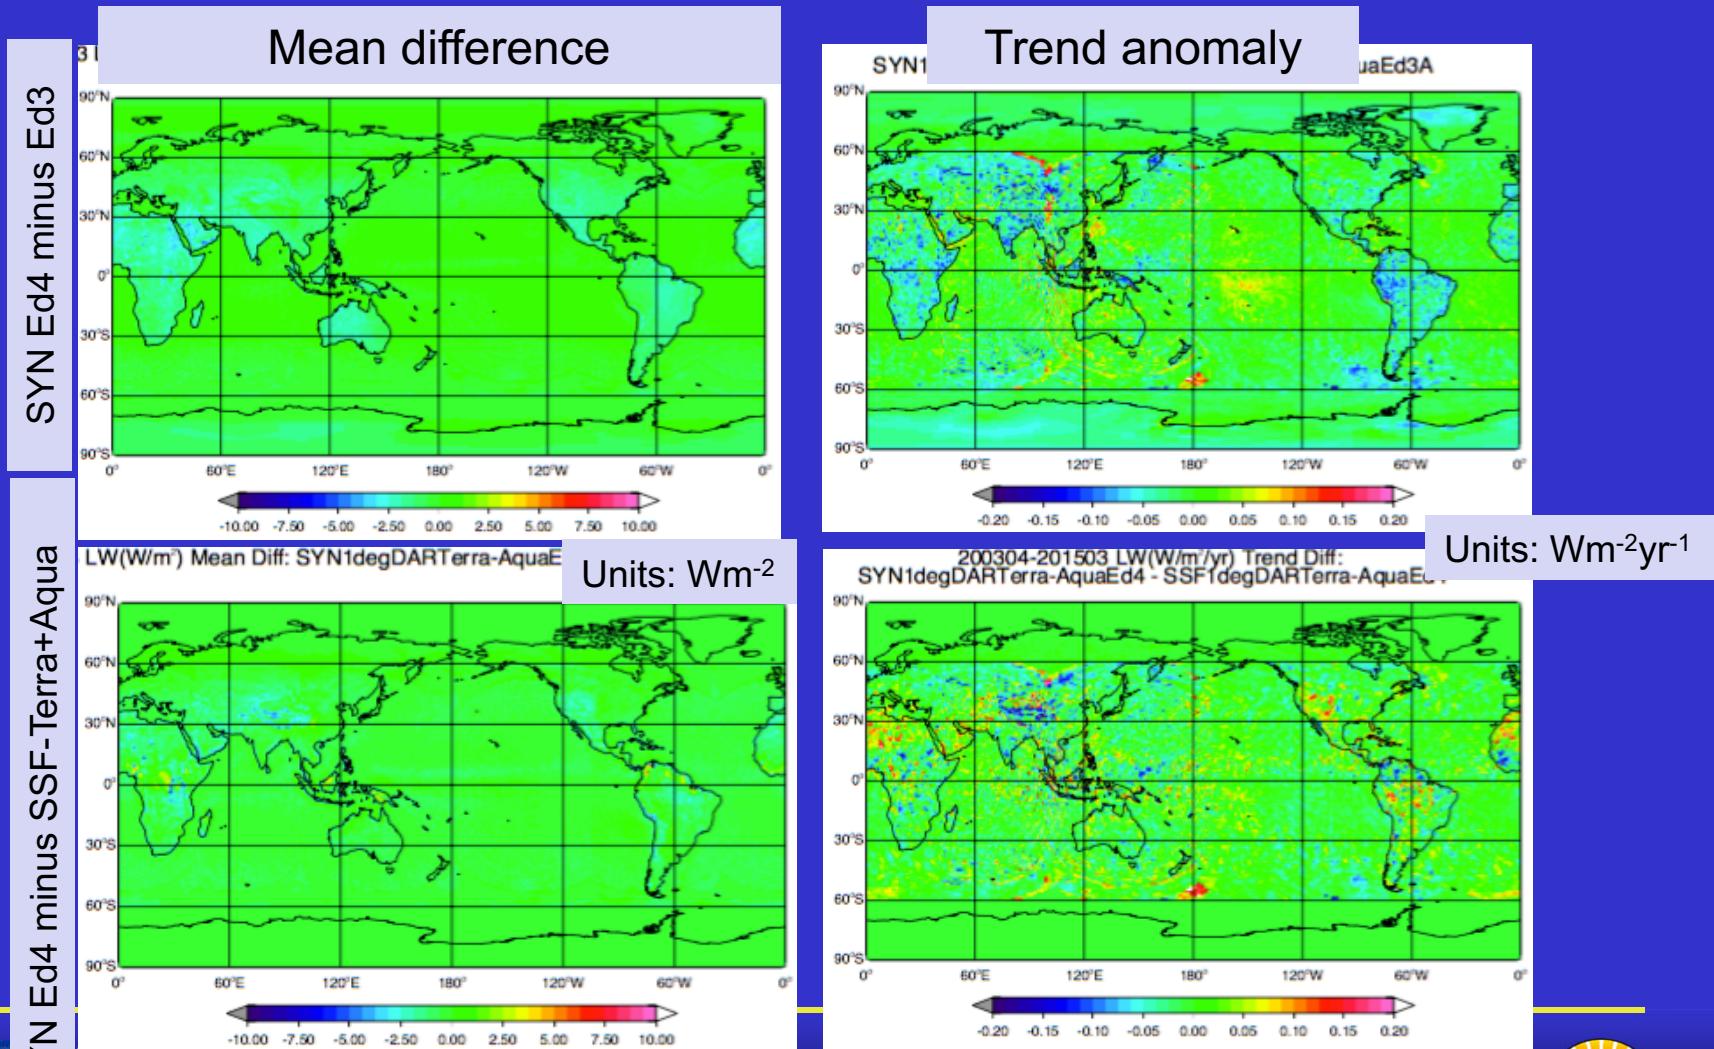

SYN – SSF LW regional trend anomalies

NASA Langley Research Center / Atmospheric Sciences

SYN Ed4 LW flux comparisons

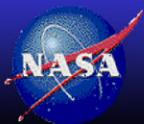

NASA Langley Research Center / Atmospheric Sciences

SYN Ed4 trend anomaly conclusion

	Ed3 SW	Ed3 LW	Ed4 SW	Ed4 LW
SSF-Terra	96.27	239.21	96.79	239.21
SSF-Aqua	96.06	238.96	96.60	238.79
SYN	97.56	238.79	96.87	238.57

- The SYN Ed4 minus SSF1deg-Terra&Aqua have smaller regional SW and LW flux differences than Ed3
- The relative SYN Ed4 regional SW and LW flux trends are smaller compared to SSF1deg than Ed3
- The SYN1deg Ed4 global mean SW flux is 0.77 Wm^{-2} less than Ed3, for LW -0.22 Wm^{-2}
 - SSF1deg Ed4 – Ed3 SW $\sim 0.5 \text{ Wm}^{-2}$

SW SENSITIVITY STUDIES

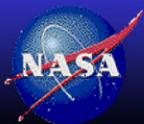

NASA Langley Research Center / Atmospheric Sciences

Planned GEO visible to SW flux studies

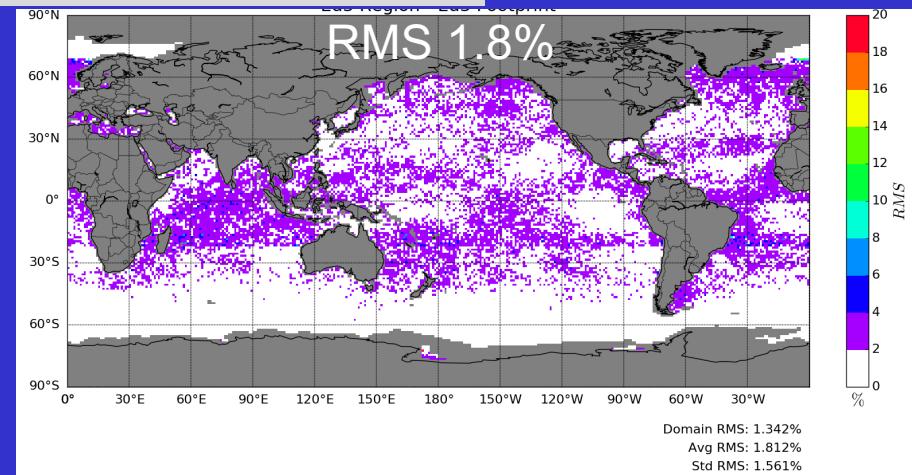

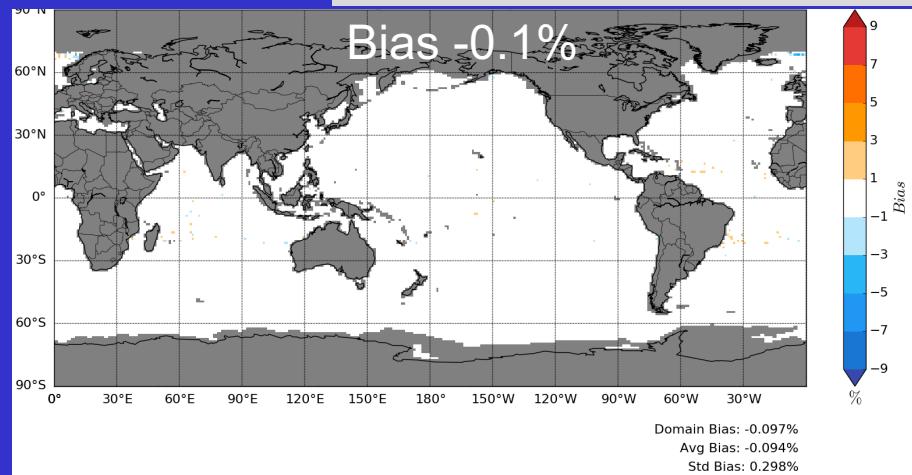

- GEO derived SW flux
 - Calibrate GEO visible channels with MODIS C6
 - Theoretical GEO visible to MODIS band 1 ($0.65\mu\text{m}$) radiance conversion
 - Empirical (SSF) GEO-MODIS-like to BB radiance conversion
 - Convert BB radiance to flux using CERES TRMM ADMs
 - Normalize GEO fluxes with CERES using coincident data
- 1-hourly GEO from 3-hour reduced the Aqua-based GEO minus Terra observed fluxes RMS error from 13.6 to 9.0 W m^{-2}
- ADM studies
 - Footprint vs regional, MODIS vs GEO clouds, TRMM vs Ed4 ADM
- SSF and Himawari-8 multiple visible channel to BB radiance studies
 - Adding $11\mu\text{m}$ improves SSF based NB2BB from 10.3 W m^{-2} to 8.6 W m^{-2}
 - Use SSF derived multi-channel NB to BB coefficients with Him-8
- Test theoretical GEO NB to BB radiance models designed for each GEO
 - Use ScaRaB BB radiance to evaluate improvement
 - Use Aqua based models and compare with Terra observations

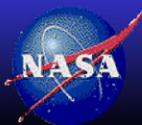

ADM sensitivity studies

Regional (110km) minus Footprint (20km) TRMM SW ADM application

CERES radiances and MODIS clouds, Jan 2010

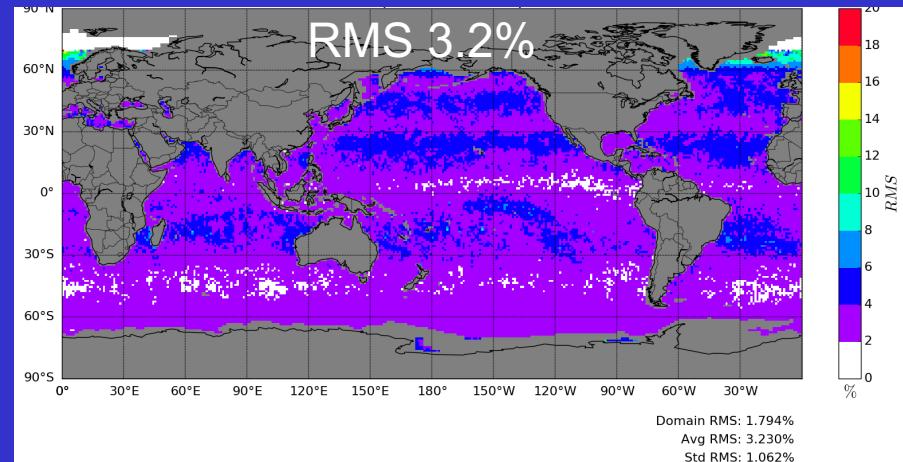

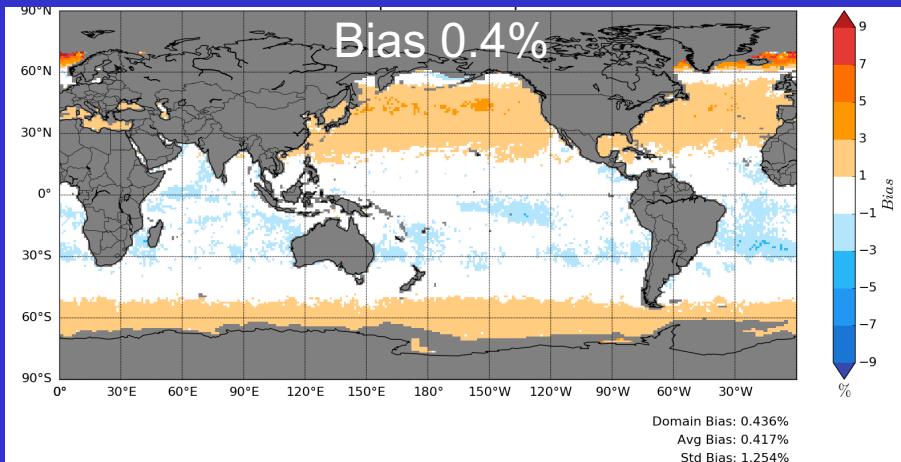

- Little dependence of footprint size when applying TRMM SW ADM

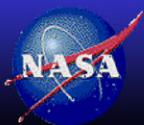

TRMM minus Ed4 SW ADM

Using CERES footprint radiances and MODIS clouds, Jan 2010

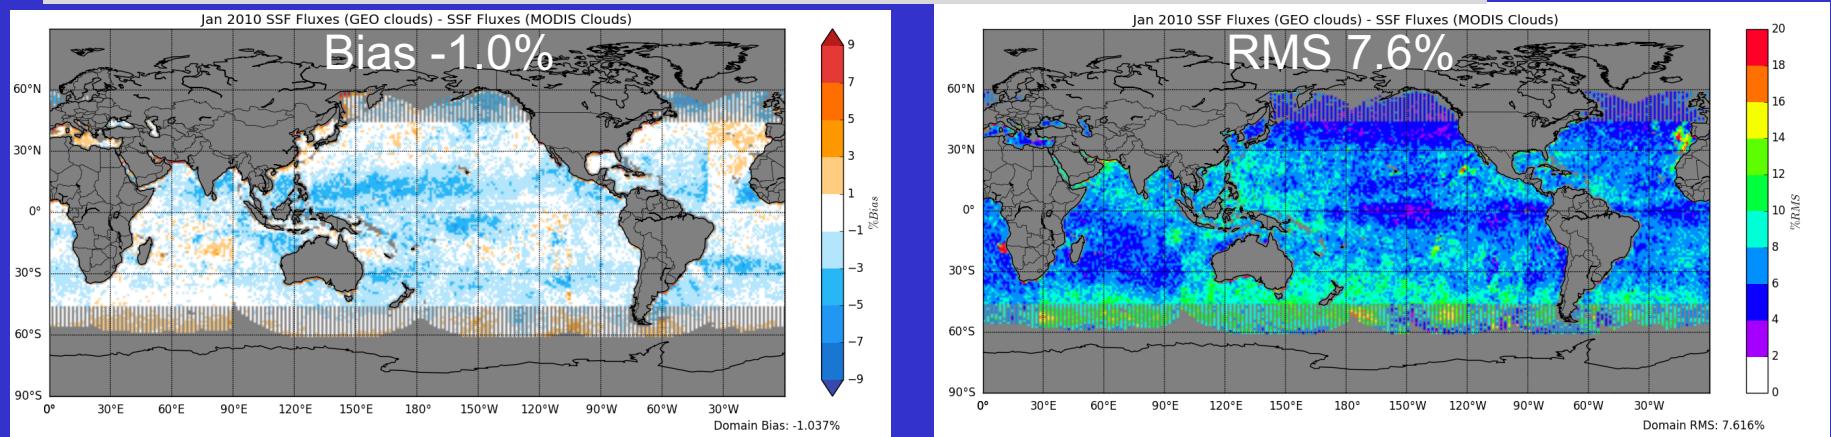

- SZA (zonal) dependent TRMM vs Ed4 SW ADM difference
- TRMM orbit within $\pm 35^\circ$ latitude

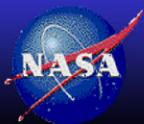

GEO minus MODIS clouds ADM fluxes

Using CERES footprint radiances and TRMM SW ADM, Jan 2010

- Cloud property quality the largest factor in application of the TRMM SW ADM

Conclusions

- The TRMM ADM greatest limitation is that the GEO cloud properties should be MODIS-like
 - Cloud group working to retrieve GEO clouds similar to MODIS, great potential for Him-8 and other 3rd generation GOEs
- Ed4 GEO MODIS-like to BB radiance conversion also based on MODIS clouds, based on SSF
 - Use theoretical direct GEO to BB radiance in Ed5
 - Test using ScaRaB fluxes
